REPORT

OF THE

Minister of Education

FOR THE YEAR 1931

TO HIS HONOUR THE RIGHT HONOURABLE THE ADMINISTRATOR.

YOUR HONOUR,—

I beg leave to present the Report of the Department of Education for 1931.

During the past year education in Ontario has continued to make its usual progress, in that the conditions of the schools, the supply of teachers, and the attendance of pupils are alike satisfactory, in spite of the financial stringency and the pressing need of a prudent economy. At a time of this kind the costs of education were bound to come up for special discussion. Conferences of trustees have been held and individual boards have cut down expenses. In so doing they have acted wisely and, until present conditions, which are world-wide and common to all countries possessing efficient school systems, show signs of improvement, no step should be neglected to lessen the taxation of the people. The functions of school boards, with the extensive powers conferred upon them by the school law, are now of particular importance. I am confident that trustees generally will exercise these powers with discretion and, since the control over local taxation for school purposes is in their hands, economies, without injury to the schools, should result. By keeping in close touch with the ratepayers, even to a degree not directly specified by the law, they will be able to carry the judgment of all those whom they represent in school matters. This is especially needful in respect to new undertakings, such as buildings or extension of existing buildings. The Inspectors whose duties are discharged under the authority of the Department have been instructed to aid school boards to the utmost extent by such advice and suggestions as will help them to curtail expenditures without diminishing efficiency. Sympathy is due to the trustees who face a situation of which we have no previous experience in maintaining the educational standards of our young people. It is a commonplace consideration that the schools are different from, and of more vital consequence to the community, than any other form of social activity. The future of the country being dependent upon the growing generation is the object that has to be kept in view. The present stringency will pass. When it does, the record of the Province in education should show no permanent ill effects.

Control of School Taxation

As the municipal bodies collect the school taxes, the question has arisen to what extent the municipalities ought to have a right to determine the school rate. Thus far, as is well known, the Legislature has limited such powers to

refusal of the requests from school boards to raise money for capital outlays by debentures. The sale of debentures being ultimately connected with the general credit and liabilities of the municipality, this limitation was not unnatural. The municipal councils, in such cases, may refer the by-law asking for the money to the ratepayers for decision. For the most part this arrangement has worked well. Comparing the number of the by-laws adopted by municipal councils with those sent to the ratepayers, it may be said, generally speaking, that refusals have never been many. The negotiations between school boards and councils in the matter of capital expenditures have seldom led to unnecessary friction. A good understanding between the two bodies has prevented this. Co-operation between them during any period of financial stress, great or small, is essential. There is no obstacle, in my judgment, to analogous unanimity in the matter of the annual rate. The ratepayers are the same people in each branch of expenditure and if consulted would undoubtedly favour friendly conferences and amicable arrangements, rather than controversy and an appeal to the statute. The school boards, being elected by the ratepayers who elect the councils also, have controlled their own expenditures for generations. It is now suggested in some quarters that they be placed under municipal control. This could be done only by an enactment of the Legislature. The change would be a complete reversal of the policy of the Province in relation to the schools. In accordance with accepted practice, the people generally should be consulted before infringing upon the right of local boards to control the cost of education. There is no present indication that the Legislature would approve such a measure and it is difficult to see how any Government could proceed along the line proposed without the plainest warrant from public opinion. Whatever essays in this direction may have been tried in other countries, they have little application to the situation in Ontario which from long experience has built up its own system of schools with remarkable results.

Intermediate Schools

This is not to argue, however, that changes should not be made in the constitution and administration of the system. In fact the machinery of education requires amendment from time to time, as circumstances alter, and to modify the structure itself in the right direction is sound policy, because standing still and living on the achievements of the past is likely to mean retrogression. The proposal to set up a new type of school, called the Intermediate School, is an illustration of what is designed as educational progress. This type of elementary school has been tried with advantage both in Great Britain and in the United States and is based upon the mentality of the child up to the age of eleven years and the need of a regrading of classes in order to provide different courses of instruction as well as a greater choice of subjects, for children beyond eleven years. The division of primary instruction in elementary schools into two stages has afforded a marked stimulus to the work of pupils and is believed by those competent to judge to be a natural evolution. There are likewise practical advantages to be gained by establishing a post-primary school placed between the primary and the high school. Under existing conditions there is duplication of courses with consequent increase of expense which could be avoided. A familiar instance of this in Ontario is the division of the high school termed the lower school. This is part of the elementary course of study and could be taken up with better results in the intermediate school. It may be that when school boards in large centres with high schools were permitted to provide this instruction in the secondary schools,

an idea of economy was a factor in the decision. The increase of attendance in high schools, however, has eliminated this factor, assuming it to have been part of the original design. The cost of secondary education has been raised by an expansion of work which should be done elsewhere. The elementary school as organized at present with its fixed courses is not wholly satisfactory in that it delays those whose purpose is to proceed to the professions or to the universities, while in the case of those who have other aims, it fails to give the variety of courses which are provided in an Intermediate School and which are closely associated with the pupils' future occupations. These, briefly stated, are some of the benefits that would follow such reconstruction of school organization as is here indicated and the whole plan, in all its bearings, is earnestly recommended to those who have the welfare of our young people at heart.

The Place of Examinations

The department has received some complaints respecting the increase of fees paid by candidates for Departmental examinations. It appears advisable that a clearer understanding should exist on the question of examinations in all its aspects. The desire for economy in public expenditures accounts for the enhanced fees which have been accompanied by a decrease in the fees paid to examiners and presiding officers. The cost of these examinations to the Province is a heavy one and last year the sum of a quarter of a million dollars, over and above the fees received from candidates, was thus dispersed. The connection of the Minister of Education with examinations arises from his duty under the statute to determine the qualifications of those who wish to enter the teaching profession. The voluntary action of the universities has added to this duty the conduct of matriculation examinations to avoid duplication of machinery and cost. Joint boards on which the Department and the universities are equally represented prepare the papers and appoint associate examiners to value the answers. The purpose is to afford facilities for examining those who plan to take a university career or to enter the teaching or other professions. Excepting these candidates, no one is required to write on any Departmental test. The pupils in our schools from the primary classes to the highest class of the collegiate institute may pass successfully through the Provincial school system without writing on any but the school examinations which are under the local authorities. Every effort has been made by the Department to encourage pupils to escape the unnecessary burden of written examinations by accepting the teachers' reports on Lower School and this year on Middle School standing providing they attain in the school a prescribed and not too onerous standard. Despite these measures, the number of those who desire to write has increased from year to year. A belief appears to have taken hold of many persons that a written examination is the sole and best test of educational efficiency and that pupils should be induced to show their prowess in the examination halls at whatever hazard to health, convenience, or expense. From this point of view the Department has always dissented and still does so. If a practicable method could be discovered for preventing the wholly unnecessary writing of Departmental examinations, it would be applied, but thus far, for reasons which need not be detailed here, a rule that would not work injustice to some has not yet been devised. I am informed that many candidates employ the certificates thus gained in seeking positions in business life and that a claim to possess matriculation standing renders it easier to do so. This is not the purpose of Departmental examinations and constitutes an undeserved reflection on our secondary schools, but those who insist upon their right to use examination certificates for commercial ends should at least be willing to pay for them.

Elementary Schools

The elementary school very largely reflects the interest of ratepayers in education. No question affecting the school fails to elicit an expression of opinion. In the case of the rural school, there was a time—not many years ago—when the notice of the annual meeting failed to interest any save the few who could always be depended upon to see that the formalities of the School Law were not neglected. In recent years a change has come about. Ratepayers now appeal to the Department for directions for the conduct of the meeting and for information on such matters as the qualifications of voters and trustees and on sundry other questions.

The reorganization of the inspectorates under the Department now enables each Inspector to devote more time to the work of the class-room; he finds opportunity to discuss school problems with the trustees as well as with the teacher; he meets the ratepayer who also has a problem for solution. As a result of his energy, tact and knowledge, difficulties are smoothed, progressive measures are adopted and greater co-operation attained.

Among the forces that are contributing very materially to the success and influence of the school are such organizations as the Women's Institutes, Home and School Clubs and the Junior Red Cross. In no small measure is credit due to one or more of these organizations for the attention that is being given in the schools and the interest that is being shown by parents in such subjects as Agriculture, Household Science, Music and Art, and also in the care of school property.

The enforcement of the School Attendance Acts and the compliance of parents with the provisions of the Acts have brought about a radical improvement both in attendance and in the general tone of the school. In 1931, the percentage of attendance throughout the Province was greater than in any previous year.

The scheme of admitting candidates to the high schools on the certificate of the Principal has been in force for a number of years but has been adopted only by the large urban centres. The adoption of the scheme by Entrance Boards to include smaller centres such as towns, villages and school sections has been gradually taking place all over the Province.

The year just past has been one marked with a steady increase in the number of Fifth Form Classes whose courses are the same as those prescribed for the first and second years of the high schools. This interest in the establishment of such classes augurs well for the establishment of the intermediate type of school with its varied programme which will bridge the gap between the elementary and the secondary schools.

Secondary Schools

During the year 1931, there were 67 collegiate institutes and 140 high schools in the Province. Although boards are desirous of maintaining up-to-date school buildings with the necessary equipment, prevailing conditions have compelled them to curtail expenditures. In the adoption of this policy, their co-operation with the municipal authorities will undoubtedly meet with general approval without in any serious way affecting the service that the school will continue to give. The boards and the principals, however, have had to face the problem of accommodation for an increased attendance and in some cases measures of a special character have been resorted to. The reasons for this increased attendance are in the main three in number and they apply particularly to the Middle and Upper School classes. The university is now

requiring not Middle School or Pass Matriculation but also Upper School or Honour Matriculation standing of applicants for admission to the majority of the courses. School boards are beginning to appreciate the value of highly trained teachers with the result that they are engaging only teachers with First Class certificates. The inability owing to industrial conditions of the young people to secure employment at a time when they have completed four years in the high school, has resulted in their return to the Upper School course, while the teachers in the public and separate schools while continuing to give the best of service are not unmindful of the duty of seeking to improve their qualifications.

The number of continuation schools last year was 222, an increase of five over the preceding year. In those schools 490 teachers were employed. Approximately 175 of those schools were organized to give instruction in both the Lower and Middle School courses. Notwithstanding the range of subjects the teachers are required to teach their energy is deserving of high praise. An outstanding feature in the qualifications of the continuation school teachers is the rapidly increasing number of university graduates. With the growing demand for First Class teachers by the public school boards and the enlarging number of graduates in training at the Ontario College of Education, a much larger number of graduates on the staffs of the continuation schools may be expected in the near future.

Agricultural Instruction

When the position of Inspector of Agriculture in elementary and secondary schools became vacant by the regretted death of Dr. Dandeno, it was decided to select some one with special experience and qualifications for expanding and carrying on the work which has shown satisfactory results during the past twenty years. I have appointed to this post Mr. Norman Davies, Principal of the Ridgetown Agricultural High School, who during seventeen years' successful teaching developed so strong an interest in the subject of agriculture as to win for him the headship of the exceptional type of school at Ridgetown. At this institution, where pupils are given vocational training which in content and purpose prepares for agricultural occupations, the results have warranted the belief that the schools of the Province where greater attention to the subject is desired may profit by this experience. In the organization of the Department, the Inspector of Agriculture will for the future be attached to the Branch devoted to Vocational Education and thus be in close touch with the remarkable development that has attended the various kinds of education promoted by this Branch. Should the establishment of Intermediate Schools, already referred to, take shape, it is manifest that the place of agriculture in the curriculum could readily be made to assume a more important part of the instruction and be applied to schools in the smaller centres and rural sections. It is this form of vocational instruction rather than courses in trade and technical subjects, which would appeal to rural localities.

Schools and Teachers

In computing results by the statistics available, it should be noted that as the municipal year and the elementary school year correspond, the statements concerning the latter are for the calendar year. The statistics for the secondary schools cover the school year from September to June. The elementary schools number 7,164 and the enrolled attendance is 658,535. This is an increase of 12,459 over the previous year. The average daily attendance is also better by nearly the same figure. There are twenty-four evening elementary schools with

an enrolment of 4,043 pupils. The elementary schools are staffed by 17,062 teachers, all of whom are certificated, in marked contrast to former times when many schools were taught by those holding no professional certificates and without adequate training for their tasks. This improvement in teaching quality since the War, when enlistments for the army revealed some illiteracy, is one of the chief causes of the advancement in general education. There is a surplus of teachers waiting an opportunity to secure schools owing partly to the larger attendance at the training schools and partly to the lessened demand for Ontario teachers from the various occupations and from the other provinces. A period so exceptional affords natural ground for lengthening the term of professional training. As a body of professional persons desirous of improving their standing the teachers favour the longer term.

The secondary schools of all types, including evening schools, number 586 with an enrolled attendance, part-time or whole-time, of 159,780. The annual charge for maintaining elementary schools exceeds \$40,000,000, while the maintenance of secondary schools calls for \$21,667,826. These statistics, which can be profitably examined in detail by the tables in the appendix, are cited for the purpose of setting forth the magnitude of Ontario's educational task, from the discharge of which the Province has never shrunk even when, as at present, taxation for school purposes was felt by the population to be heavy.

Schools Attended by French-Speaking Pupils

Gradual improvement continues to be shown in the condition of the schools attended by French-speaking pupils. This is due in large measure to the excellent spirit of co-operation shown by school boards, teachers, training-school staffs, and inspectors in working out the plans of the Department, initiated in 1927 following the report of the Committee of Inquiry. During the period that has elapsed since the adoption of this report, the Department has maintained what might be considered a continuous investigation of these schools. The inspectors pay regular visits twice a year to each school, assisting the teacher by advice and direction, and make detailed reports of the condition of the school to the Department. Two officers, the Director of English Instruction and the Director of French Instruction, are in constant touch with the situation, spending some time with each inspector assisting in the examination of the pupils and the demonstration of proper methods of instruction. Through this careful supervision the Department is not only kept informed regarding the condition of the schools but is also assured that all possible progress is made. One evidence of advance in efficiency is the increasing numbers of French-speaking pupils who are passing the high school entrance examinations yearly. In 1931 there were 1,248 successful candidates from these schools, an increase of 286 or 30 per cent. above the number for 1930.

Apart from more effective plans of supervision of the schools, the principal reason for the improved conditions is doubtless the better methods of teacher-training now in operation. The University of Ottawa Normal School, established by the Department in 1927, trains teachers for First and Second Class certificates and has had an increased attendance year by year since its inception. The enrolment this year is 100, an advance of twenty over last year, and the prospect of a progressive increase in the attendance in the future seems assured. It is hoped that the time is not far distant when the schools will be staffed entirely by teachers with the higher professional qualifications. In the meantime, the Model Schools at Sturgeon Falls and Embrun are graduating yearly an average

of seventy Third Class teachers with better academic and professional equipment than prevailed a few years ago among teachers of this grade. The Model School at Sandwich prepares students for entrance into the Normal School. The summer schools afford facilities for the completion of Middle and Upper School standing for Normal Entrance, and full advantage of this opportunity is taken by practically all the teachers holding lower grade certificates. With this growing improvement in the qualifications of the teachers, it is confidently expected that the character of the work in the schools will continue to advance.

Vocational Guidance

Elsewhere in my report, reference is made to the high percentage of attendance in both elementary and secondary schools, to the careful provision made in guarding the health of the pupils, to the generosity of boards in supplying organization and equipment calculated to produce the best results, and to the zeal and devotion of teachers to the task of instructing and training their pupils for their work in life. During a period of years, under the direction of skilled teachers students have passed out from the schools to occupy positions of trust and distinction. The education that they received was deemed sufficient for them as well as for all others enrolled in the same class-rooms, some of whom failed on leaving school to find themselves in their proper setting. With industrial growth and expansion there came the provision for vocational training which linked up the industries with the schools. By many it was felt that vocational education had bridged the gap between the school and life outside the school, and that having finished the vocational course the boy was prepared to take his place in the industrial and commercial life of the community.

The Chief Director of Education in his "Report on Vocational Guidance" (see Appendix A) has forcefully demonstrated that the schools have not yet to any appreciable extent undertaken the educational guidance of the youth as he passes through the various grades of his school life. Co-ordination of the school with the industries is part of the work of the teacher. With his thorough knowledge of the pupil gained through several years of close contact and observation, he should be in a position to give the guidance that will enable the youth to fit into his proper place. Under proper vocational guidance he will be trained to be a good citizen. During the past two years courses in vocational guidance have been offered at the summer school at the Ontario Training College in Hamilton. A good beginning has actually been made by local boards in several urban centres. Consideration is now being given by the Department of Education to the question of establishing a Bureau of Vocational Guidance.

Respectfully submitted,

GEO. S. HENRY,

Minister of Education.

APPENDIX A

REPORT ON VOCATIONAL GUIDANCE

BY THE CHIEF DIRECTOR OF EDUCATION

Perhaps the most distinctive of the objective features of the past one hundred years have been the extension of the franchise and the multiplication of opportunities for universal education. These two have developed side by side. They have been regarded by most people as complementary. In a recent article in the *Atlantic Monthly*, Dr. Adams points out that "there is something charmingly naive in the faith that one had only to transfer power to the people at large to find them using it wisely and unselfishly and that by the simple process of counting noses we could automatically reach right conclusions." This faith was, to a large extent, based on the belief that education could work miracles and that mountains of ignorance, prejudice and selfishness could be removed in a few generations by sending everybody to school. Our faith in the power of the right kind of education has not been shaken and the fact that the millenium has not been ushered in after one hundred years of democracy suggests the question,—are educators working along the right lines?

Formerly, school education for the great majority of pupils was confined largely to acquiring a certain skill in the use of the keys necessary to unlock the stores of accumulated knowledge. As a matter of fact, the educand was usually satisfied with knowing how to read and write and carry on certain mechanical operations in arithmetic. These accomplishments became, however, to him ends not means; not keys but coins. He left school at the age of 13 or 14 years and entered an occupation chosen at random or, in many cases, not chosen at all, but forced on him by economic necessity. In many cases he adapted himself to his job and became a successful and useful citizen. In other cases, after squirming about and changing jobs from time to time, he eventually found himself in his proper or, at any rate, in his most comfortable setting. In a comparatively few cases,—and in our present zeal for vocational guidance we wonder that the cases were so few,—he was forced to write himself down as a dismal failure, usually blaming his lack of "schooling" or of proper direction for what was very probably a congenital tendency to gravitate towards the bottom layers of everything in life. During this period of the history of education those who belonged to the intellectually, socially or financially elect remained in school and college for from four to eight years longer and were exposed to a programme of subjects which, because they were well organized and sanctioned by tradition, were looked upon as essential to the proper development of the mind. Much was heard about content, cultural value, organized body of knowledge, formal discipline, transference,—these were the words to conjure with. Browning's "Grammarians" and his successors flourished. The masters taught subjects, not boys. And even after many countries had extended the period of compulsory attendance at school and had placed on their statute books Adolescent School Attendance Acts, the old emphasis on the programme of academic studies persisted, the justification for the extended period of compulsory attendance resting in the belief that the advanced education offered

in the schools better prepared the youth for abundant living (in the Biblical sense) than did the education obtained more casually out of school.

But suddenly, and strangely enough at the same moment, educators in the Old and in the New World awoke to the realization that life in the school-room must be more closely related to life outside the schoolroom if the modern experiment of schools for everybody, and everybody at school, was to succeed. They recalled that subjects of study considered as purely academic were, in the Middle Ages, vocational. They were forced to an awareness of the fact that the civilized world was in the machine age and that the schools were out of step. And so the utilitarian element entered. There was a shifting of the emphasis to the industrial and technical type of education. On the North American continent we are now in the midst of this new phase. It seems almost as if we were at the exact point of greatest condensation. Growing out of this we have a direct linking up of the schools and the industries. Co-ordinating or vocational guidance officers are now regarded as indispensable members of school faculties. Vocational guidance of a sort is being perfected. Ontario has still much to do even in this field. During the past two years, courses in vocational guidance have been offered at the Summer School in Hamilton, but prior to this local boards in several urban centres had already made a successful beginning. The Department of Education in this Province has under consideration the establishment of a bureau of vocational guidance and is prepared to give a lead to local authorities, on whom the responsibility of furthering this school service primarily and properly rests.

In many cities both in the Old and the New countries organizations for guidance and placement have been functioning for some years. In the smaller cities and towns of England one of the most influential of these organizations is known as a "Juvenile Employment Committee," is appointed by the local educational authority and is more or less loosely connected with the Ministry of Labour. In the larger cities much of the advisory placement and follow-up service is carried on directly by the Ministry of Labour, which appoints local committees to act in co-operation with the teaching and managerial staffs of the schools to which these committees are attached. A very clear and concise statement of the work of such committees will be found in a "Report on Placement and Vocational Guidance in British Schools" recently presented to the Toronto Board by Mrs. H. P. Plumptre who, during a visit to England last summer, made a study of the work of these committees in a number of urban centres. In the United States, educational guidance is largely in the hands of the local school boards, and the amount of attention devoted to this branch of school work varies greatly. Last December, Chief Inspector Frank E. Perney of Hamilton and the writer visited Providence, R.I., to learn at first hand what was being done in that city towards the proper direction of pupils in the schools. Providence was selected chiefly because the organization there is under the direction of Dr. Richard D. Allen, a recognized authority on this line of work and one whose lectures in Brown University and whose summer courses at Harvard have done much to stimulate interest in the subject throughout the New England States. It is significant that Dr. Allen's organization in Providence is known as the Bureau of Vocational Guidance and Research, the inference being that no proper educational guidance can be given without a full knowledge of the mental calibre, the interests, the environment, etc., of all the pupils in the schools. The following statement, prepared by Dr. Allen, gives in a concise form the essentials of the Providence plan. It is to be noted that the Providence

form of school organization is known as the 6-3-3 plan, i.e., 6 years of elementary school, 3 years of junior high school, 3 years of senior high school.

"Guidance in the Providence Junior High Schools

There are six advisers in each of the Providence junior high schools. Each adviser has charge of a class of pupils for three years, making all adjustments in grading, classification and choice of electives. Each adviser teaches 'Occupations' to her own class each year. It is a required subject for one period per week in all of the junior high school grades. The advisers also teach one period per week of 'Orientation' or group guidance. The balance of their programme is devoted to the teaching of the regular subjects. In each school the advisers are organized into a guidance department under the direction of a chairman or department head who is allowed five periods per week for supervision and five periods for the continuous study and construction of the school programme. Advisers are usually appointed from the teaching staff but are expected to train themselves for the work in summer and extension courses, as well as by reading, conferences, and lectures. To a large extent the varied programme of the adviser acts as a self-training device.

Guidance in the Providence Senior High Schools

In each senior high school there are six advisers each of whom assumes charge of a class when it enters the school and carries it through its entire high school course. The adviser has complete charge of grading, classification, choice of electives, and special programmes. About two-fifths of the adviser's teaching time is devoted to guidance, and three-fifths to teaching allied subjects. Group guidance is carried on by means of student forums and discussions in which the Case Conference Method is employed. Departments are organized under the direction of chairmen or department heads to whom five periods per week are allotted for supervision. Each adviser, under the direction of the central office, makes follow-up studies of her classes at one, three, and five-year intervals. By this means valuable statistics are being accumulated in regard to the effectiveness of high school curriculums. All advisers are appointed from the teaching staff. Teachers to whom children naturally turn for advice and encouragement make the most successful advisers. The school programme is worked out by the head of the guidance department from the data obtained by the class advisers concerning the needs and interests of pupils.

Guidance in the Elementary Schools

In the elementary schools of Providence guidance is largely educational. Each teacher charts her classes on the Providence Class Personnel Charts. By means of the charts the principal is able to grade and classify his school and to make individual adjustments. A programme of standardized tests at the *beginning* of the fall term enables each teacher to plan remedial instruction. A card containing the permanent record of educational achievement is kept for each child. The back of the card contains a mental growth chart, continuous I.Q. record, and other guidance helps, such as brief family data, physical handicaps, and special interests and abilities."

In a report of his visit which Mr. Perney made to the Hamilton Board he draws the following conclusions:

1. That there is a place for a definite vocational guidance programme in the schools of Hamilton.
2. That the system adopted should be applicable to local conditions and the local school organizations.
3. That the system should have in view four essential functions:
 - (a) Information, i.e., furnishing complete information to pupils regarding vocations and the necessary preparation to insure success in them.
 - (b) Adjustment, i.e., providing the necessary courses and training in the different schools.
 - (c) Placement, i.e., establishing contact with employers and furnishing them with properly qualified employees.
 - (d) Follow-up, i.e., by keeping contact with graduates of our educational institutions to determine the value or lack of value of the school education as a preparation for the selected vocations.

There appears to be something significant in the fact that Mr. Perney in his recommendations to the Hamilton Board makes no reference to the building up of an elaborate organization for carrying on this highly desirable service. As an experienced educator he no doubt realizes that in its broad interpretation educational guidance embraces the whole of education, and that it is the duty of every teacher to give direction to those under his care,—he probably knows his pupils better than the modern parents do. There is a danger that whenever any one phase of education is stressed, over-elaboration, complicated machinery, special investigators and the like sometimes effect a certain artificiality which may defeat the very ends in view. Whenever a boy ceases to be a pupil and becomes a “problem,” it is time to reconsider the function of the teacher. The cause of education has suffered at times from the enthusiasm of the highly trained specialist. There is a danger of machine-age ideas getting into the blood of the schoolman. There are many horrible examples of too conscientious teachers, in their zeal for educational statistics, intelligence tests, achievement tests and the like, exploiting their pupils and forgetting that Mary and John are not little pawns to be moved about on a checker-board for the purpose of solving a problem, but are individuals to be trained and guided. Although there is a tendency in certain quarters to laugh at the older psychologists,—as if there were any difference between the old and the new psychology other than a new jargon,—William James’ “Talks to Teachers” might well be read by all schoolmen at least once a year, if they wish to remain sane and human. Education is in danger at times of being wounded in the house of its friends. Educational guidance means the whole of education. All the schools can do is to set a goal and direct effort towards that goal.

The pupil who goes through a modern school or series of schools is better prepared for complete living than his grandfather was at the same age. His health has been guarded, provision has been made for enriching his leisure; as an individual he is in a position to get more out of life. It is believed also that provision is rapidly being made in all modern school systems for the training of the youth of the country along lines that will enable them to fit easily into their proper niche in the professional, industrial and commercial structures, which are possibly the most prominent features of the present-day civilized state. Something more, however, is needed and it is to provide this essential that educationalists must direct their thought if they

are to justify the time, the money, the opportunity that a generous and hopeful public has given to them so unstintingly. The youth of to-day is not only an individual with a mental and spiritual nature to satisfy, he is not only a creator doing his share of the world's work, but now, more than ever before is he a social being, a citizen of the world. He must develop a social consciousness. This does not come to him automatically because he has a cultured mind and a well-attuned body; it does not come by prayer and fasting; he must be trained to be a good citizen just as he must be trained to become a good mechanic. To be a good citizen he must first of all fit into the social unit, the family. It is a curious commentary on our social organism that while we require girls and boys to receive professional training, pass examinations and obtain certificates, before they are allowed to undertake the teaching of children in the mass, any young girl, with no training as a homemaker, or any young man, without undergoing any mental or physical tests, may found a home and rear a family. The common result of such neglect in training is an unhappy home and a disintegration of the social unit; the results, in extreme cases are divorces, or imbecile offspring, or both. Unless this social unit, the family, is sound and unbroken, the nation will perish. Until education is in a fair way to accomplish what was expected of it when the franchise was extended to the people as a whole, the world is not safe for democracy. It is to make good citizens that the modern school must bend its energies. This does not involve a change in the programme so much as a change in emphasis. Social studies have for years occupied a place,—a somewhat unimportant place,—in the curriculum; they must in future occupy a more prominent place even if this means the sacrifice of some of the well-organized and traditional courses of study that we teach because we've always taught them and without which we scarcely believe a school can function. The public will need to be educated up to the point where they will recognize that some of the so-called "fads and frills" are actually the essentials of a modern school programme.

G. F. ROGERS,
Chief Director of Education.

Toronto, February 8th, 1932.

APPENDIX B

REPORT OF THE CHIEF INSPECTOR OF PUBLIC
AND SEPARATE SCHOOLS

Changes in Provincial Inspectoral Staff, 1931

I. RESIGNATIONS:

Mr. T. W. Standing, B.A., was appointed Public School Inspector for the County of Brant in October, 1902. He had taught in the Public Schools of the County of Brant for six years. After graduating from the University of Toronto in 1891 he spent 11 years teaching in High Schools as assistant in the Tillsonburg and Pembroke High Schools and as Principal in the Carleton Place High School. As an Inspector, Mr. Standing discharged the duties of his office with marked efficiency and enjoyed at all times the full co-operation of his teachers and Boards of Trustees. He retired on December 31st, 1931.

Mr. John McCool, M.A., was appointed Public School Inspector for East Bruce in April, 1906. He had 12 years of experience as a teacher in Public Schools during five of which he was Principal of the Hanover Public School. He taught in the Walkerton and Meaford High Schools, in the Brockville Collegiate Institute and for nine years in the London Collegiate Institute. His services as an Inspector for a quarter of a century are recognized as years of conscientious effort, real helpfulness to his teachers and of devotion to the cause of education. He retired on December 31st, 1931.

Mr. J. W. Crewson, B.A., was appointed Public School Inspector for Glengarry in September, 1910. He secured his education at Elora, Guelph, Cobourg, Brantford, Hamilton and Victoria College, Toronto. He taught in the Public Schools of the Counties of Wellington and Halton and of the towns of Milton and Gravenhurst. Later he was appointed Principal of the Cornwall Model School from which position he resigned to become Classical Master in the Cornwall High School. Mr. Crewson, both as teacher and Inspector, gave to the schools of the Province over 54 years of loyal, earnest and capable service. He retired on August 31st, 1931.

Mr. Isaac Day, B.A., was appointed Public School Inspector for East Simcoe on January 1st, 1888. Previous to this appointment he was a teacher in School Section No. 2, Nottawassaga, in Creemore Public School and in the Bradford Model School. During his 44 years of experience as an Inspector for East Simcoe his work was distinguished by strong leadership and his schools made good progress. He retired on August 31st, 1931.

Mr. J. H. Smith, M.A., was appointed Public School Inspector for West Kent in 1907. Before receiving the appointment as an Inspector he had 10 years of experience in Public School work in the Counties of Wellington, Perth, Elgin and Middlesex. From 1888 to 1907 he was engaged in High School work, holding positions on the staffs of the Ridgetown, Petrolea and Dutton High Schools. Over 50 years of his life were devoted to educational effort, which

was most successful. Few Inspectors have had a finer co-operation from their teachers than Mr. Smith had. He retired on August 31st, 1931.

II. APPOINTMENTS:

The following were appointed to the staff of Inspectors during 1931:

1. *G. N. Edwards, B.A.*, Principal, Rectory Street School, London, to the County of Glengarry, to succeed J. W. Crewson, B.A. His duties began on September 1st, 1931.

2. *Colin W. Lees, B.A., B.Paed.*, Principal, Hugh Beaton Public School, Walkerville, to Renfrew South to succeed G. G. McNab, M.A., D.Paed. His duties began on September 1st, 1931.

3. *A. B. Lucas, B.A., B.Paed.*, an Assistant Master in Malvern Collegiate Institute, Toronto, to the County of Kent, No. 2, and the County of Essex (in part), to succeed G. A. Pearson, B.A. His duties began on September 1st, 1931.

4. *W. A. Marshall, B.A., B.Paed.*, Principal of Deer Park Public School, Toronto, to a recently formed Inspectorate consisting of Simcoe West, Grey (in part) and Dufferin (in part). His duties began on September 1st, 1931.

5. *W. R. McVittie, B.A.*, Assistant Master in Toronto Normal Model School to District Division IX, with residence at Cochrane, to succeed L. A. Marlin, M.A. His duties began July 1st, 1931.

6. *J. M. Game, B.A., B.Paed.*, Principal of Davisville Public School, Toronto, to Bruce East, Grey (in part) and Huron (in part), to succeed John McCool, M.A. His duties began on January 1st, 1932.

7. *Walter Joyce, B.A.*, Principal of Central Public School, Brantford, to the County of Brant and Norfolk (in part), to succeed T. W. Standing, B.A. His duties began on January 1st, 1932.

8. *Rosario Masse, B.A.*, Assistant Master at Winchester High School, to Roman Catholic Separate School Division V, with residence at North Bay, to succeed H. J. Payette, B.A. His duties began on September 1st, 1931.

9. *Raymond Maurice, B.A.*, Assistant Master at Embrun English-French Model School to Roman Catholic Separate School, Division II, with residence at Sudbury, to succeed Joseph Bechard, B.A. His duties began on September 1st, 1931.

III. TRANSFERS:

J. A. Gibson, B.A., B.Paed., was transferred from Wellington North to Simcoe East to succeed Isaac Day, B.A. The transfer dated from September 1st, 1931.

G. G. McNab, M.A., D.Paed., was transferred from Renfrew South to Wellington South and City of Guelph. The appointment dated from September 1st, 1931.

L. A. Marlin, M.A., was transferred from District Division IX to a recently formed Inspectorate in the Niagara Peninsula consisting of Welland (in part), Lincoln (in part) and Haldimand (in part). His residence is at Welland. The transfer dated from September 1st, 1931.

G. A. Pearson, B.A., was transferred from Kent No. 2 to Kent No. 1, to succeed J. H. Smith, M.A. The transfer dated from September 1st, 1931.

J. M. Bennett, M.A., was transferred from Roman Catholic Separate School Division XVIII to Roman Catholic Separate School Division XIV in the City of Toronto. The transfer dated from March 1st, 1931.

H. J. Payette, B.A., was transferred from Roman Catholic Separate School Division IV with residence at North Bay to a recently formed Inspectorate, Separate School Division VIII. His residence is at Chatham. The transfer dated from September 1st, 1931.

J. V. Scanlan, B.A., was transferred from Roman Catholic Separate School Division V with residence at Pembroke to Roman Catholic Separate School Division XII, with residence in Toronto. The transfer dated from March 1st, 1931.

Reorganization of Inspectorates

During the school year 1930-1931, the problem of adjusting County and District Inspectorates was given consideration. The purpose in making the adjustment was to equalize the Inspectoral duties by assigning to each Inspector 100 to 140 teachers, the number depending upon the urban centres within the Inspectorate. It was followed as a general principle that the supervision of two rural classrooms required as much time and effort as the supervision of three classrooms in an urban school. In the reorganization urban and township municipalities were not divided but it was found impossible to recognize county boundaries, hence some Inspectorates include portions of as many as three counties. There has been, however, a general expression of satisfaction on the part of the Inspectors with the changes made in the Inspectorates on September 1st, 1931.

Correspondence Courses

The Correspondence Courses are under the direction of Mr. Neil McDougall, B.A., General Inspector, and with him are associated a permanent staff of three teachers which is increased during the winter months by several temporary teachers. In view of the fact that each teacher on the staff is responsible for 75 to 150 pupils depending on the grade, the average cost per pupil is only about one-fifth of the average cost per pupil in the rural schools of the Province. The results have been successful beyond all expectation. The pupils have been prompt in the return of their answers and show constant improvement in their work, while the parents have shown a splendid spirit of co-operation. The total enrolment for the school year, 1930-1931, reached 1,200, the great majority of whom seemed to make just as rapid progress as they would have made in a good school. The excellent progress made by pupils in the Primer Grade as well as in the other grades was very gratifying. Of the twelve pupils who wrote their High School Entrance Examinations last June eleven were successful, three of them passing with honours.

These Courses cover the Public School work from the Primer to the High School Entrance Examination. Carefully prepared lessons based on the authorized text books in use in the Public Schools are sent out at regular intervals each month to those enrolled, and the answers returned are carefully examined by the teachers on the staff. The answer papers are then sent back with the necessary corrections and explanations to the pupils.

Summer Courses

Mr. N. McDougall presents the following report on the Summer Courses held in 1931:

For the past twenty years or more, Summer Courses have been conducted by the Ontario Department of Education, for the benefit of teachers who desire to spend part of their summer vacation in an effort to improve their academic and professional standing, and thus become more efficient as teachers in the elementary schools of the Province.

No fees are charged those who attend these Courses, but the provisions formerly made for assisting teachers with an allowance for living and travelling expenses have been discontinued, except in the cases of those who served overseas during the War, to whom one dollar (\$1.00) per day is allowed. At the Summer Courses of 1931, 4,626 teachers were in attendance.

The following summary indicates the numbers enrolled in the various subjects of the Departmental Summer Courses, 1931: Agriculture 487, Art 261, Auxiliary Classes 158, Cadet Corps 63, Commercial 307, English and History (Refresher) 56, High School Assistants 67, Household Science 87, Kindergarten-Primary 308, Manual Training 64, Oral French 80, Science (Refresher) 61, Vocal Music 276, Upper School 910, School Librarians 32, School Nurses 34, Vocational Guidance 19, English-French 700, Vocational Courses 305, Physical Education 351.

Interchanges of Teachers Within the Empire

Mr. Neil McDougall, General Inspector, is in charge of these interchanges for Ontario and he makes the following report for the current school year:

During the school year, 1931-1932, thirty-five Ontario teachers are on exchange with teachers in other parts of the British Empire or with teachers in other Provinces of Canada. Of these there are twenty-six exchanges with teachers in the British Isles and nine inter-provincial exchanges. Thirty of these exchanges are with teachers in Public Schools, and three with teachers in Separate Schools. There are also two exchanges of Secondary School teachers, namely, that of Mr. Norman McLeod, Oshawa, with Mr. Walter M. Robb, of Glasgow, Scotland, and Miss Margaret Hunter, Danforth Technical School, Toronto, with Miss Annie L. Campbell, of Edinburgh, Scotland. The inter-provincial exchanges include teachers from British Columbia, Alberta, and Nova Scotia, who have exchanged with Ontario teachers.

These interchanges are arranged upon the plan agreed to at the Imperial Education Conference held in London, England, 1923. By this plan teachers during the year of exchange retain their own salaries, and the year is credited to them for all educational purposes the same as if it had been spent in their own schools.

Dr. J. B. MacDougall presents the following reports:

- (1) On School Attendance for the year 1931.
- (2) On the Educational Services made possible by the School Cars.

School Attendance

Attendance in elementary schools for the year 1931 has made a new high record with a decided advance over the year 1930. Health and weather conditions were unusually favourable throughout the year and the character of the times acted as a steadying force in the schools. But the chief reason lay in the finer co-ordination of forces and the closer checking and follow-up work as the new child accounting system got under way. Rural schools of all classes advanced from a general average of 87.11 per cent. in 1930 to 89.05 per cent. in 1931, an

increase of 1.94 per cent. Urban schools made a record of 91.84 per cent., an advance of 1.56 per cent. over the previous year, and all the schools of the Province, for the first time in its history, passed the 90 per cent. mark and now stand at 90.81 per cent., an increase of 1.71 per cent. over the previous year. In concrete figures, the year 1931 showed a register record of 9,500 more pupils receiving an adequate education in our elementary schools than the year 1930. The standard is coming close to the maximum attainable. Remediable losses are now reduced to a minimum. Improvement in health only remains, and this is being steadily attained by the extension and close supervision of the public health organization of the Province.

Railway School Cars

The School Car continues to justify its unique place in the educational machinery of the Province. Five cars are in operation, covering an area of almost 1,000 miles and two more cars will go into commission in the present year. They are rendering a varied and indispensable service. They care for the education of children who otherwise would be wholly denied. As an evidence of efficiency, children who entered five years ago with not even speaking knowledge of English are to-day passing the Entrance Examination into Secondary Schools. Through evening classes, adult members of these scattered communities, 90 per cent. of whom are non-English, are acquiring a working knowledge of the English language and, through incidental talks and specialized studies conducted by the teachers, the parents are better equipped for their occupational, business and social duties. Each car, as well, has its annual quota of persons who are volunteering for citizenship rights through naturalization. Thus the cars are performing not only a local but a national service in welding new Canadians into the fabric of Canadian citizenship.

School Health Work

Dr. J. T. Phair, Director, Division of Child Hygiene, presents the following brief summary for 1931:

These are to be considered times when municipalities and people seriously debate the present or potential value of public services with the thought of curtailment of those least essential to the public good. School health supervision, whether as an activity of a school board or a board of health, has in many centres been carefully scrutinized as to its place in the new order of things. Such a time of assay was foreseen, and we have attempted, in a small way, during the last year, to consolidate what we have gained rather than to extend the service into places where economic conditions mitigated against its possible adoption. The interest of the staff has been towards stocktaking and the serious consideration of accomplishments and failures. It is a rather remarkable tribute to the appreciation of the public as to the value of school health supervision, when we are able to report its discontinuance in one centre only in the Province during the year just concluded. In one municipality the service was established for the first time and in one other re-established after a lapse of some years.

Music and Art

The work of the schools in the subjects of Music and Art has been extended greatly during the past year, due to the co-operation of trustees, teachers and Inspectors, and the liberal grants given by the Department of Education. The following tables of comparison indicate this extension:

Music

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1929-1930.....	187	\$7,344 00	349	\$10,563 00	\$17,907 00
1930-1931.....	219	9,421 00	512	16,869 00	26,290 00
Increase.....	32	\$2,077 00	163	\$6,306 00	\$8,383 00

Art

School Year	No. of Special Teachers	Grants paid to Teachers	No. of Boards	Grants paid to Boards	Total Amount of Grants
1929-1930.....	123	\$5,127 00	54	\$1,850 25	\$6,977 25
1930-1931.....	147	6,152 00	64	2,250 00	8,402 00
Increase.....	24	\$1,025 00	10	\$399 75	\$1,424 75

Arithmetic

From the reports of a considerable number of Inspectors it is evident that in many classrooms the subject of Arithmetic still holds its traditional place on the daily programme of the Elementary School. More time is being given to this subject, especially in the rural schools, than to any other subject on the Courses of Study. In the Junior grades the long mechanical problem, in its proportions far beyond the needs of every-day life, still occupies a prominent place on the blackboard and consumes on the average one hour and a half to two hours of the child's time each day, and with only mediocre results being obtained. In the Intermediate and Senior Grades at least a quarter of each school day is devoted to this subject.

The more modern viewpoint with respect to Arithmetic advocates that less time be given to the subject, but that the time be used to much better advantage by:

1.—Emphasizing Oral Arithmetic.

Not only should the computations required in the recitation lesson, whenever possible, be done without the use of pencil and paper, but the necessary computations in the seat exercises should be done mentally as far as possible. Mental Arithmetic stimulates intensive effort, gives a fine facility in the use and properties of numbers, utilizes short and direct methods of approach and solution and trains pupils to appraise mathematical situations more accurately.

An outstanding educationist has written: "From long and varied experience, both in teaching the subject and inspecting the teaching of others, I firmly hold that compared with written arithmetic alone, mental arithmetic, if systematically taught, will produce at least twice the knowledge and twice the power in a given time."

2. Confining the work in Arithmetic to the consideration and solution of problems which meet life's needs.

3. Training pupils so that they will form the habit of verification step by step not only in the analysis of the problem, but in the mechanical work as well.

4. Emphasizing the method of attack rather than the solution.

5. Encouraging originality rather than slavery to type solutions.
6. Insisting on direct, concise, logical and accurate statements in the solution of problems when written solutions are necessary.
7. Visualization whenever possible of the data of a problem as an aid in the solution of it.

The English Subjects

The teaching of English is the most important work which the Elementary School undertakes. Accordingly, it needs to be strongly emphasized that instruction in every subject should contribute its share toward the indirect or incidental teaching of English.

The main requirements in the teaching of English may be briefly stated as follows:

- (1) A training in Speech which will enable pupils to make statements and express thoughts and feelings clearly and correctly in speech and also enable them to understand spoken English.
- (2) A training in Reading which will enable pupils to derive from books a full measure of what they have to give of information and enjoyment, and to read aloud in such a way as to command attention and give pleasure.
- (3) A training in Writing which will enable the pupils to express themselves clearly, accurately and fitly in written form.

The chief difficulties in the Elementary Schools in the teaching of English are: (1) vagueness and lack of definite purpose in the teaching; (2) a failure to recognize that reading, writing, spelling, literature, composition and grammar need to be practised as valuable parts in the teaching of English as a whole and not as isolated subjects; (3) a lack of frequent and careful inventory of each pupil's needs in order that weaknesses may be overcome and definite progress made.

The written compositions of candidates for High School Entrance standing reveal the fact that the average standard reached is not sufficiently high and many pupils receive admission to the High Schools who, while proficient in a number of the subjects, have not learned to express their thoughts in clear and suitable written form. The oral composition of Junior forms and the combined oral and written compositions of the Senior grades will require to receive more constant attention, both directly as a part of the daily time-table and indirectly in the daily written work done by the pupil in all subjects of the Course of Study.

High School Entrance Examination

For some years High School Entrance Boards for the larger urban centres have been admitting candidates to the Lower School of a High School in the subjects of Group II as well as in those of Group I on the certificate of the Principal of the Public, Separate or Normal Model School that the Courses in the subjects have been taken up in accordance with the Regulations. This method of admission has now been extended to towns and villages and to those ungraded or graded rural schools where the Principals of High School Entrance classes are experienced and successful teachers, have been three or more years in the school, and where their confidential reports have been in close agreement with the standing obtained by their candidates on the Departmental High School Entrance Examination.

In a letter from this office to the Public and Separate School Inspectors it was suggested that the Public School Inspector, as Secretary of the High School Entrance Board, might bring the matter of admitting candidates on the recommendation of the Principals to the attention of all High School Entrance Boards

in his Inspectorate with the object of extending the method as far as possible without lowering the standard of admission. The response has been most encouraging.

In approximately 75 per cent. of the Inspectorates of the Province, the High School Entrance Boards for 1932 will accept, in lieu of the High School Entrance Examination, in the case of urban schools and rural graded schools of six rooms or more the recommendation of the Principals. In the case of one ungraded rural school, the certificate of the Principal is being accepted. It is expected that in the year 1933 still further progress with respect to this method of admitting pupils to Secondary Schools may be reported.

Progressive Features in 1931

1. More attention was given to experimental work in education.
2. An extension of the use of the objective type of test was made.
3. More consideration was given to the interests of the non-academic pupils.
4. A wider adoption of the intermediate type of school with the diversity of programme which it offers.
5. The extension of the Rotary plan of organization.
6. In a number of centres consideration was given to the question of Vocational Guidance.
7. An increase of 77 in the number of Fifth Classes.
8. A large number of teachers improved their academic and professional standing. In 1930 the number of teachers enrolled in Summer School classes was 3,920; in 1931 the number enrolled was 4,626.
9. Further improvement in the appearance of school premises.
10. Public and Separate School Inspectors gave more time to the needs of the classroom and less to clerical duties.
11. Improved equipment in rural schools.
12. Better school libraries.
13. A large number of High School Entrance Boards extended the method of admitting candidates to the Secondary schools on the recommendation of the Principal of the Elementary School.
14. In 1930, the number of pupils enrolled in the Correspondence Courses given by the Department of Education was approximately 1,000; in 1931 the number was 1,200.
15. Rural School Sections with low assessment were greatly helped by the new scheme for the distribution of Legislative Grants.
16. Experimental projects in health teaching were undertaken.

General Remarks

The year just closed was a difficult one for the Elementary Schools. In the rural areas as well as in the urban centres the deepening financial depression was keenly felt. As a result, Boards found it necessary to curtail expenditures on buildings, on equipment, and in the rural Sections on teachers' salaries also. No Elementary School, however, was closed for lack of financial support. On the other hand, the people of the Province have manifested a strong desire to maintain the high standards of efficiency in the schools even though handicapped financially. Further, the schools have continued to receive the active interest and support of many local and provincial organizations.

At this time, I wish to express appreciation of the fine, conscientious and efficient work which is being done by the Inspectors of the Public and Separate

Schools, and of the splendid co-operation which they are receiving from teachers, Boards of Trustees, and many others who have a real interest in educational effort.

I am indebted to those officials who have contributed reviews for this report, and to my colleague, Mr. J. D. Campbell, B.A., Assistant Chief Inspector, for his hearty co-operation and assistance.

V. K. GREER,

Chief Inspector.

Toronto, January 31st, 1932.

APPENDIX C

REPORT OF THE HIGH SCHOOL INSPECTORS

During the past year there have been fewer changes than usual in the accommodations of the High Schools and Collegiate Institutes of the Province. The reason for this probably lies in the economic and industrial conditions which prevailed throughout the year. New buildings, however, were completed at Kenora, Prescott and Plantagenet, and extensive additions at Harbord (Toronto) and Almonte. At Humberside (Toronto) a very fine extension is under way; while the Collegiate Institutes at Vaughan Road (Township of York) and Fort William have been provided with additional space for academic classes through the increased accommodation in their Technical branches. During the year the East York High School and the Stamford High School (Niagara Falls South) attained the status of Collegiate Institutes.

The number of pupils in attendance at the High Schools has shown an unusual increase; particularly in the middle and upper school classes of the larger centres. Many pupils who in normal times would have left high school have been unable to find positions and have returned to school; and many others have come back to complete in the upper school the requirements which the university courses demanded. As a result of these two factors, the classes in many schools—particularly in the senior divisions—were much larger than usual and the resourcefulness of Principals was taxed to the utmost to accommodate the enlarged classes.

It is interesting to note that many of the teachers of the Province are making constant efforts to improve their professional standing. In 1924 the number of Specialists engaged in teaching in our High Schools and Collegiate Institutes was 1,199; seven years later the number had increased to 1,689. This means that the proportion of Specialists increased during this period from 72.35 per cent. to 75.41 per cent. Teachers are realizing more and more the value of high scholarship and many are taking advantage of the extension and summer courses to improve their qualifications. This condition reflects credit upon the teaching body and augurs well for the future of our schools.

The School Library is gradually coming into its own, and is playing an increasingly important part in the work of the Ontario secondary schools. Several of the larger schools now employ full-time librarians who are not only giving instruction in library methods and in the best means of securing information from the courses at hand; but they are doing a far more important work in encouraging and developing in their students a taste for good reading. How important it is that boys and girls should leave our schools imbued with a real interest in books and with a deep desire to read—and particularly to read what is worth while in English Literature! The Library Summer School, inaugurated a year ago, is showing a very gratifying increase in the attendance of teachers and teachers-in-training.

During the past year the method of General Inspection, which is in vogue in many of the schools in England, was introduced into our Ontario schools. Under this plan, all five High School Inspectors visited, at the same time, certain of the larger schools; in this way it was possible for them to conduct a more thorough inspection in their several departments. At the close of the inspection the Inspectors were enabled to confer with the teachers in their own departments and to discuss with them their own peculiar problems and

difficulties. Last year the General Inspection was conducted in the following schools:—Ottawa (Glebe), Hamilton (Central), London (Central), Toronto (Bloor, Jarvis, Harbord and Oakwood). The reaction of the Principals and teachers of the schools visited in this manner was decidedly favourable; and it is probable that the method of General Inspection will be extended to other large schools this year.

In closing, a word of appreciation is due the teachers of this Province for the work they are doing in instructing and inspiring the students of the schools and preparing them for their work in life. Not only in their class-room duties, but in the many extra-curricular activities which the modern school programme provides, the teachers are endeavouring to meet the challenge to prepare and equip the younger generation of Canadians for a life of noble service.

High School Inspectors.

Toronto, January 25th, 1932.

APPENDIX D

REPORT OF THE INSPECTORS OF
CONTINUATION SCHOOLS

Schools and Courses

In 1931 there were in operation in the Province of Ontario 222 Continuation Schools. Of these schools 16 were staffed by one teacher each, 152 were staffed by two teachers each, and 54 were staffed by three or more teachers. There were in all 490 teachers teaching the courses of study prescribed for Continuation Schools, an increase of nine teachers over the preceding year. Only one new Continuation School was established in 1931, Wilberforce, in the County of Haliburton. This school opened in September in the consolidated school building.

Continuation Schools with a staff of only one teacher are permitted to teach only two years of the High School course of study. Such schools are, in effect, Fifth Classes and in the opinion of your Inspectors should be classed as Public Schools, Form V. Continuation Schools with staffs of two teachers are permitted to teach four years of the High School course of study. Many Continuation Schools with staffs of three or more teachers give instruction in the Upper School subjects of the High School course of study. Such schools should soon become in name what they already are in effect, High Schools.

Teachers

Of the 490 teachers employed in the Continuation Schools in 1931, 93 were graduates of a British university and 397 were non-graduates. This shows a percentage of 18.98 graduates in 1931 as compared with a percentage of 12.47 in 1930, and 11.65 in 1929. It is gratifying to note the increase of graduates. As the number of teachers-in-training at the Ontario College of Education is very much larger in 1931-32 than in any previous year, it is probable that a still larger percentage of graduates will be found on the staffs of the Continuation Schools next year. Indeed, it appears possible that soon graduates will in large measure be the teachers for all Secondary Schools, a consummation much to be desired.

The Inspectors feel it a duty and a pleasure to refer again to the earnestness, patience and enthusiasm shown by the teachers in the Continuation Schools. As the staffs are small in most schools, the range of subjects taught by each teacher is wide. This necessitates much study and preparation and makes the work very strenuous. The teachers have been conscientious in their efforts to prepare themselves to teach effectively. Many of them are attempting to carry on college work extra-murally so as to prepare themselves and very many have given up weeks of their vacations to take summer courses provided by the universities and the Department of Education. The energy and self-sacrifice of our teachers are beyond praise.

Third Inspector

During the academic year 1930-31 only two Continuation School Inspectors were employed, owing to the fact that Mr. J. P. Cowles, B.A., had been appointed Registrar of the Department of Education. During the academic year from

September, 1930, to June, 1931, the work of inspection was carried on by Inspectors Mills and Hoag mainly. However, the Public School Inspectors were kind enough to inspect all one-teacher Continuation Schools and the High School Inspectors to inspect some thirty other schools.

In September, 1931, Mr. S. D. Rendall, B.A., Vice-Principal of the Brantford Collegiate Institute, was appointed to succeed Mr. Cowles as Continuation School Inspector. Mr. Rendall is a man of high scholastic attainments, a graduate of Queen's University, and a specialist in classics. He began teaching as Assistant Master in a Continuation School and later became Principal of a two-teacher Continuation School. By reason of scholarship and experience Mr. Rendall is qualified for the new work which he has been called upon to perform. His colleagues welcome him most heartily.

Inspection

During the year at least one visit was made to each Continuation School in the Province, as required by the departmental regulations. After each visit a report was made to the Chief Director of Education. But wherever local conditions made it advisable to do so, a second visit was made, in order to consult with the Boards of Trustees or the teachers concerned.

The Inspectors are pleased to be able to report that the Continuation Schools are making good progress, that the members of the teaching staffs show earnestness and skill in their work, and that ratepayers and parents are supporting the schools generously under the present trying conditions.

Free Secondary Schools

In the year 1921 there are 147 Continuation Schools in Ontario, of which 16 were free schools (no fees being charged), 49 were free to resident students only, and 82 were not free. In 1931 there were 222 Continuation Schools, 218 of which were free, and four were free to resident pupils only. The provision of free Secondary School education has been one of the causes leading to the remarkable increase in attendance at Continuation Schools in the past decade. In the year 1920 the attendance at Continuation Schools was 5,823 pupils, in the year 1930 it was 11,088. During this period 25 Continuation Schools became High Schools.

The provision of free Secondary School education and the great increase of attendance present problems in financing which will require much study to solve so as to equalize the burden upon the taxpayers of the Province.

G. K. MILLS,
J. P. HOAG,
Continuation School Inspectors.

Toronto, February 1st, 1932.

APPENDIX E

REPORT OF THE DIRECTOR OF TECHNICAL
EDUCATION

Time has demonstrated that the changes in our educational system which were brought about in 1911, largely as a result of the notable report of Doctor John Seath, have proved truly advantageous and adequate to the needs of the growing industrialism of the Province. The legislative action taken in 1911 in the passing of the Industrial Education Act, succeeded in turn by the Acts of 1913 and 1915, The Vocational Education Act of 1921, and finally The Vocational Education Act of 1930, made possible the implementing of practically all Doctor Seath's recommendations.

Doctor Seath's recommendations were two-fold: he advocated a sound general education as a first essential, and, coupled with this, a closer connection between the schools and the activities and actualities of life. I think it may be said that these prime essentials have been strictly adhered to in the development of vocational education in the Province of Ontario. The Regulations still retain provisions correlating the two types of instruction—academic and vocational—and the success achieved has been extremely gratifying.

The generosity of the Legislature in aid of vocational education has been an outstanding factor in the progress of the movement. The Dominion Government also contributed liberally during the decade 1919–29; and the municipalities responded by erecting and equipping school buildings of an exceptionally high grade. The Training College at Hamilton has been effective in providing a thoroughly trained body of competent teachers, and the Government grants on salaries have enabled school boards to secure excellent staffs of properly qualified teachers at remunerations which could not have been contemplated under less favourable circumstances.

At the present time almost every urban municipality can boast a Vocational High School in addition to the accommodation provided for purely academic education. From 1919 forward, the development of this class of education (considerably retarded during the period of the Great War) received a noticeable impetus. Deferred building programmes were proceeded with, made possible by the hearty assistance rendered by the Provincial and Dominion Governments. For some years the annual legislative vote was restricted to \$725,000. This has been gradually increased until for the fiscal year 1930–31 it reached the considerable total of \$1,425,000. During the ten-year period from 1919 to 1929 the Province was reimbursed by the Dominion Government to the extent of approximately \$347,000 a year, the total contribution for the ten years amounting to \$3,178,608.97.

Comparison of Progress

For purposes of comparison, statistics for the year 1925–26 have been consulted. In that year there were in operation 32 full-time day schools and 58 evening schools. The total enrolment in the day schools was 15,201 with

4,448 part-time or special pupils, and in the evening schools 35,226 pupils. For the year 1930-31 the information is reported as follows:

Day enrolment.....	29,470	Number of day schools.....	62
Special and part-time.....	3,225		
Evening enrolment.....	47,440	Number of evening schools.....	71

Ontario's programme of Vocational Education is the most diversified and highly organized in Canada. A broad foundational training is aimed at rather than specialized training in any one branch of industrial or commercial life. The schools endeavour to maintain close contact with industry through evening classes and part-time classes. Apprenticeship is encouraged in every way, special facilities being offered at the present time for the training of apprentices in the building trades.

Teacher-training is centralized in the Ontario Training College for Technical Teachers at Hamilton. The staff of the college also gives instruction to evening class teachers in various centres during the winter months.

The College of Art in Toronto serves the whole Province, while some of the larger technical schools ably support its efforts in well-organized art departments.

In view of misconceptions prevailing in some quarters regarding the function and standing of vocational schools, perhaps it is wise to emphasize that the work is essentially of a Secondary or High School character. High School Entrance is required, except in a few cases where fourth form Public School pupils are admitted to an industrial course rather than permit them to stagnate in the elementary school with neither an academic nor vocational outlook.

Statistics

The following comparative table of statistics, including the school year 1930-31 just past, indicates a healthy, progressive development from year to year. Increased enrolment demands additional staff and more extensive accommodation. As a consequence, many school boards are considering plans of extension.

DAY VOCATIONAL SCHOOLS

	1926-27	1929-30	1930-31
Number of schools.....	38	51	62
Number of full-time teachers.....	607	893	1,055
Number of part-time teachers.....	148	194	277
Number of full-time pupils on roll.....	17,359	25,558	29,470
Average attendance of full-time pupils.....	13,400	20,632	23,952
Number of part-time pupils on roll.....	2,729	2,100	2,027
Aggregate student hours of part-time pupils....	354,089	248,935	206,395
Number of special pupils on roll.....	1,626	1,437	1,198
Aggregate student hours of special pupils.....	166,928	168,366	200,878

EVENING VOCATIONAL SCHOOLS

	1926-27	1929-30	1930-31
Number of schools.....	60	67	71
Number of teachers.....	1,225	1,486	1,647
Total number of pupils.....	37,977	44,431	47,440
Aggregate student hours.....	1,569,940	2,382,929	2,258,712

SUMMARY OF EXPENDITURES BY MUNICIPALITIES

	1926	1929	1930
Expenditures.....	\$3,499,380	\$6,173,009	\$8,692,354
Legislative Grants.....	813,581	1,036,441	1,114,052

Building Programme

Extensive building operations have been carried on for the past several years. Outstanding, perhaps, are Westdale Secondary School at Hamilton and the Northern Vocational School at Toronto, both of which include provision for commercial training, and were completed during the past year. The attractive building at Westdale was erected at a cost of approximately \$1,500,000 towards which the Provincial Government is contributing slightly more than 25 per cent. This grant represents a contribution of 50 per cent. of the cost of the vocational wing, modified by a grant of 16 $\frac{2}{3}$ per cent. of certain accommodation used in common by vocational, collegiate and commercial students. The Northern Vocational School in Toronto involved an expenditure of approximately \$1,300,000 towards which the Province of Ontario will contribute some 29 per cent. In neither case do these figures include expenditure on equipment, although approved equipment also is subject to a Government grant.

Besides these imposing and commodious schools provided by the cities of Toronto and Hamilton, many other centres have been making a determined effort to establish up-to-date accommodation and to provide courses suited to their local needs. Welland, North Bay, Timmins, Kingston, Sudbury, Haileybury, Sault Ste. Marie, and Windsor are among the municipalities taking advantage of the Government assistance offered to equip themselves with modern school facilities. Fort William has erected an entirely new vocational school building, relinquishing its former accommodation to the High School pupils.

The revision of policy by the Toronto Board and its Advisory Committee, raising the status of the Eastern and Western Technical Schools from "Branch" institutions to an equality with that of the Central Technical School, has necessitated the incorporation of third and fourth year courses in the curriculum of the Danforth and Western Schools. An imperative call for increased accommodation for the students in the east end of the city has resulted in the Danforth building being extended at a cost of approximately \$250,000. It is hoped that the additional accommodation will be available early in the new year.

Vocational Education in Small Centres

Reverting to the problem referred to in my previous report, it is hoped that the amendment to the Vocational Act passed last session providing for joint Vocational School Boards will overcome the difficulties experienced by small communities and enable them to combine to give needed vocational instruction to the young people of the neighbourhood.

Training of Apprentices

The classes held during the winter of 1930-31 at Toronto, Hamilton, Windsor and Ottawa, were eminently successful. Three hundred and fourteen apprentices were enrolled and received eight weeks' instruction. The subjects covered were steamfitting, sheet metal work, carpentry, plumbing, bricklaying, electrical work, painting and paper-hanging and plastering. During the approaching winter it is planned to organize courses in Toronto, Hamilton and Ottawa. The boys were instructed in trade practice and the related science and mathematics, which is an essential part of their training not possible to obtain while working on the job.

Regulations

Based on the Vocational Education Act of 1930, which came into force on the first day of July, 1930, revised Regulations have been issued regarding the establishment, organization and management of vocational schools. The new Regulations provide for certain changes respecting part-time courses for

apprentices, the use of assembly halls, ministerial approval of expenditures, the qualification of staffs, certification of teachers, payment of fees, division of time-table, and the payment of grants. Generally speaking, due to the greater facility with which qualified teachers may now be obtained, the requirements for vocational teachers have been made considerably more stringent. Since the introduction of the revised Regulations on July 1st, 1930, no grant has been payable upon any building erected for the purpose of a commercial school or department in a municipality with a population of 50,000 or over.

An important modification of the Regulations regarding grants is that the necessary equipment and furniture should be provided before the end of the second year after the school or department has been organized. This provision was made to emphasize the fact that grants are intended to assist School Boards in their initial expenditures, and also to secure the full benefit of the equipment for those students who enter at the beginning of the course.

Special Industrial Schools

Regulations have also been drafted governing the organization and management of special industrial schools for pupils from auxiliary classes. The courses are divided between academic and practical work on a 50 per cent. basis. The practical education for boys includes elementary projects and manual operations selected from such occupations as woodworking, shoe-repairing, tailoring, barbering, etc.; while for girls, sewing, power-operating, laundering and similar subjects furnish the basis of the practical side of the curriculum.

Up to the present the cities of Toronto and Hamilton only are experimenting with this class of education. Toronto has converted the old Jarvis Street Collegiate Institute into an establishment particularly well adapted to the needs of the male auxiliary class pupils, and has also provided two schools for girls, one on Dovercourt Road and the other on Bolton Avenue. In both cases the buildings have been remodelled and put to excellent use in providing accommodation for this new type of work.

Hamilton has supplied two schools of this nature, one for girls and one for boys, which have been designated as "Handicraft Schools." These schools receive grants on the same basis as vocational schools when the special Regulations are found to have been complied with.

Federal Aid

In the new legislation passed by the Federal Parliament provision has been made for contributing the sum of \$750,000 per annum for fifteen years, amounting to \$11,250,000, for the promotion of vocational education throughout the Dominion. The amount receivable by the Province of Ontario is dependent upon the Federal census recently concluded, and has not yet been determined. The application of the subsidy has been postponed until such a time as the economic conditions of the country warrant expenditures being made.

Changes in Staff

M. A. Sorsoleil, B.A., Assistant Director of Vocational Education, has been promoted to the rank of Deputy Minister of Public Welfare. A. M. Moon, B.A.Sc., of the Peterborough Collegiate and Vocational School, has been appointed to the inspectorial staff.

F. S. RUTHERFORD,
Toronto, January 4th, 1931. *Director of Vocational Education.*

APPENDIX F

REPORT OF THE DIRECTOR OF PROFESSIONAL
TRAINING

The total registration at the several Provincial Teacher Training institutions shows a marked increase over that of last year. Particularly is this the case at the Ontario College of Education where the enrolment in the various courses for the session 1931-32 is as follows:

Enrolment at the Ontario College of Education

(1) In the one-year Household Science Course (women)..... 6

(2) In the High School Assistant's Course:

	Male	Female	
Intra-Mural.....	218	254	
Extra-Mural.....	10	4	
Summer (1931).....	25	39	
	<u>253</u>	<u>297</u>	— 550

(3) In the Pedagogy Course:

Summer (1931).....	103
Winter (1931-32).....	173
	<u>— 276</u>

Note.—In this course, in June, 1931, there were granted 37 Bachelor of Pedagogy, and 4 Doctor of Pedagogy Degrees.

(4) In the Librarians' Course..... 43

(5) In the Specialist Courses not included in High School Assistant's Course 29

Total enrolment..... 904

(6) Registered in the Specialist Course there are 299 students classified as follows:

	Intra-mural	Extra-mural	Total
Agriculture.....	11	..	11
Art.....	19	..	19
Classics.....	14	7	21
English and French.....	16	12	28
English and History.....	36	17	53
English and German.....	..	1	1
French and German.....	21	3	24
French and Spanish.....	7	1	8
Household Science.....	12	1	13
Mathematics and Physics.....	20	6	26
Science.....	15	5	20
Physical Education.....	74	1	75
Total.....	<u>245</u>	<u>54</u>	<u>299</u>

(7) In the supplementary course there are enrolled:

In the First Class Public School Course.....	37
In the Elementary Art Course.....	40
In the Commercial Course.....	112
In the Music Course.....	14
In the Physical Education Course.....	179

(8) The academic standing of the students in the High School Assistant's Course is:

B.A. or M.A.....	512
B.A.Sc.....	4
B.Sc.....	4
B.Sc. F.....	2
B.S.A.....	11
B.H. Sc.....	5
B.Com.....	12
	<hr/> 550

(9) Twenty-one Graduates from Universities outside Ontario are registered as follows:

Acadia.....	1
Mount Allison.....	2
Laval.....	2
McGill.....	2
Montreal.....	2
Manitoba.....	7
Saskatchewan.....	2
British Columbia.....	2
Illinois.....	1

Enrolment in the Provincial Normal Schools

The registration in the Normal Schools shows an improvement in the academic standing of the teachers-in-training. In 1930-31 the First Class numbered 49.2 per cent. of the total. In 1931-32 this percentage has been increased to 51.3 per cent. During the year 105 teachers holding Permanent Second Class certificates succeeded in raising their standard to Permanent First Class certificates.

The enrolment in the several schools is:

(1) First Year:

	First Class			Second Class			Grand
	Male	Female	Total	Male	Female	Total	Total
Hamilton.....	31	94	125	21	76	97	222
London.....	30	118	148	23	91	114	262
North Bay.....	27	59	86	45	108	153	239
Ottawa.....	30	79	109	38	111	149	258
Peterborough.....	25	87	112	21	74	95	207
Stratford.....	44	84	128	29	64	93	221
Toronto.....	54	146	200	51	107	158	358
Total.....	241	667	908	228	631	859	1,767

(2) Second Year:

	First Class			Second Class			Grand
	Male	Female	Total	Male	Female	Total	Total
Stratford.....	3	17	20	1	7	8	28
Toronto.....	9	16	25	2	10	12	37
Total.....	12	33	45	3	17	20	65

Toronto (First Year) Kindergarten-Primary..... 51

(3) Total Registration:

	Males	Females	Total
First Class.....	253	700	953
Second Class.....	231	648	897
Kindergarten-Primary.....	51	51
Total.....	484	1,399	1,883

The enrolment for the Normal-Model Schools for 1931 was:

	Boys	Girls	Total
Ottawa.....	295	248	543
Toronto.....	348	300	648
Total.....	643	548	1,191

Special Courses

At each Normal School a special class in Art or in Physical Education was instituted in order to enable First Class teachers-in-training to qualify for the Elementary Certificate in these branches. The enrolment was:

Art—Hamilton, 54; London, 83; North Bay, 37; Peterborough, 76.
Physical Education—Ottawa, 83; Stratford, 93; Toronto, 70.

Provisional Certificates

In 1931, twenty-three provisional certificates were issued—two High School Assistants', seven First Class and fourteen Second Class. Of the teachers obtaining these certificates one came from Australia, one from British Columbia, three from England, one from Ireland, four from Manitoba, one from New Zealand, one from Nova Scotia, seven from Saskatchewan and four from Scotland.

Changes in the Teaching Staffs

Mr. Wm. Prendergast, B.A., B.Paed., Principal of the London Normal School, retired in July, 1931. Mr. Prendergast taught in the Elementary Schools of the Province for four years, in the High Schools for seven years, and served as Separate School Inspector for thirteen years. He was appointed a Master on the Staff of the Toronto Normal School in 1908 and transferred to the London Normal School as Principal in 1922. He performed his duties conscientiously and effectively and was exceptionally successful in making efficient those teachers-in-training who had the good fortune to come under his tuition.

As Principal of the London Normal School Mr. Prendergast was succeeded by C. E. Mark, B.A., D.Paed., transferred from the Toronto Normal School. Dr. Mark in turn was succeeded by Mr. W. K. F. Kendrick, B.A.

In the death of Mr. Alexander T. Cringan in February, 1931, the Normal Schools lost an able instructor. Mr. Cringan joined the staff of the Toronto Normal-Model School first as part time instructor in 1901 and as full time instructor in 1919. His enthusiasm, zeal, sympathy, and teaching power inspired his pupils with a love for music and made him a forceful factor in promoting an interest in musical education in the schools of Ontario.

The vacancy caused by Mr. Cringan's death was filled by transferring Mr. Charles E. Percy from the London to the Toronto Normal School.

Other vacancies were created by the death of Miss Agnes Hanahoe in July and by the retirement of Mr. H. T. Dickenson in February, Miss Marie V. Bibby, B.A., in February, Mr. Jas. H. Wilkinson in June, and Miss Adelaide F. Laven in November.

Miss Hanahoe was appointed to the staff of the Ottawa Normal-Model School in April, 1902.

Miss Laven was appointed to the staff of the Toronto Normal-Model School in July, 1901. She was succeeded by Miss Doris Soden.

Miss Bibby was appointed to the staff of the Toronto Normal School in September, 1923. She was succeeded by Miss Madeline C. Young, B.A.

Mr. Dickenson was appointed Instructor in Music in the London Normal School in 1925. He was succeeded by Mr. Charles E. Percy who on being transferred to Toronto was succeeded by Mr. Albert D. Jordan.

Mr. Wilkinson was appointed Manual Training Instructor in the Toronto Normal and Model Schools in 1903. The vacancy created by his retirement was filled by the transference of Mr. Gordon Apperley from the Model School Staff, Mr. Apperley being succeeded by Mr. Cecil McMullen.

Owing to the increased attendance Mr. Floyd Rivers, B.A., B.Paed., was added to the staff of the North Bay Normal School and Mr. Wm. E. M. Aitken, M.A., Ph.D., to the staff of the Normal School at Stratford.

Building Extensions

The addition to the Ontario College of Education building was completed and equipped and opened for use in September, 1931. This addition, although already taxed to its capacity, has helped materially in the organization of the school and in accommodating the large classes now in attendance.

DUNCAN WALKER,

Director of Professional Training.

Toronto, December 31st, 1931.

APPENDIX G

REPORT OF THE PRINCIPAL OF THE ONTARIO
TRAINING COLLEGE FOR TECHNICAL TEACHERS

Attendance

The enrolment of teachers-in-training continues to increase, as shown by the following table:

Year	Enrolment
1925.....	183
1926.....	204
1927.....	239
1928.....	270
1929.....	276
1930.....	371
1931.....	514

It may be noted that the number for 1931 is almost three times that enrolled in 1925, the first year of the Training College.

The year 1931 showed an increase in the enrolment of 143 students, of whom ninety were enrolled in the course for the Ordinary Vocational Certificate. The unusual increase in the number looking forward to teaching technical subjects may be attributed to the prevailing depression in industry. The unemployment situation touches not only unskilled labour but engineers, architects and skilled craftsmen, and has turned the attention of many in these groups from industry to teaching.

This increased enrolment has brought the supply of vocational teachers up to the demand, if not beyond it. On the other hand the enrolment of pupils in the technical schools has increased more than usual during the last year or two, and for the same reason, lack of opportunity for employment. That the greater demand for teachers in the technical schools will absorb the increased supply of vocational teachers is, however, doubtful.

The supply of vocational teachers has overtaken the demand, and if the number of applicants for the course continues to increase at the same rate as last year it may be desirable for the sake of the applicants themselves to restrict the number admitted, either by raising the requirement for admission, or by adjusting the number admitted to the probable demand.

Reorganization of Course

At present the course for the Ordinary Vocational Certificate takes twenty weeks, ten of which must be taken in the spring or autumn session, and ten in two summer sessions of five weeks each.

This unusual arrangement of time was made to meet the situation as found in 1925, when the Training College was established.

(1) There were many uncertificated persons teaching practical subjects in the technical schools. As these were required to take a teacher-training course it was desirable to arrange the time for the course in such a way that there would be as little disturbance as possible of the school organization through the absence on leave of the persons concerned.

(2) The supply of certificated teachers in 1925 was not equal to the demand. Advisory Committees were faced with the necessity of recruiting new teachers directly from industry.

As new technical schools were being established every year it appeared likely that these conditions would continue for some time, and as long as they continued it would be well to continue the time arrangements for the teacher-training course.

These conditions, as was to be expected, have passed away. The supply of vocational teachers has overtaken the demand, and there appear possibilities of a considerable over-supply. Further, nearly all of the larger centres in the Provinces have established vocational schools, and it is not likely there will be any great increase in the number in the near future.

The unusual time arrangement established in 1925 has never been quite satisfactory. New applicants have been permitted to enter the course at the beginning of any one of the three periods provided, and this has resulted in difficulty in organizing the work to meet the needs of students at three different stages of progress. Some students have delayed completing the course for two, three, or even four years. Further, as the classes have become larger it has become increasingly difficult to provide adequate practice-teaching experience in the short ten weeks' session.

As the conditions that made desirable the division of the course into three periods no longer exist it would appear that the time has come when the students shall be required to attend continuously and complete the course for a certificate without interruption.

Summer Courses

The special summer courses continue to attract teachers seeking to improve their qualifications. The attendance in 1931 was 25 per cent. greater than in 1930.

A characteristic situation was that provided by the teachers of mathematics in technical schools. A number of these made a request that an opportunity be provided in a summer course whereby they might get some insight into the mechanical operations performed in the shops of the technical schools, and so the better adjust to the needs of the pupils the methods of teaching the mathematics related to these operations. Accordingly a short intensive course of three weeks was arranged. Part of each day was spent in the shop becoming acquainted with those operations that involved calculations, and the rest of the day in a conference discussing special methods of teaching the related mathematics.

The enrolment was as follows:

Vocational Specialist Certificate.....	98
Vocational Guidance.....	20
Specialist Manual Training.....	24
Elementary Manual Training.....	39
Elementary Household Science.....	59
Sewing and Dressmaking.....	30
Special Methods for Teachers of Mathematics in Technical Schools.....	14

Extension Courses

No extension courses were offered in 1931. Owing to the increased attendance of resident students, vocational as well as manual training students, it was impossible to find time for carrying on extension courses.

For some years short extension courses in methods of teaching have been given during the months of January to March in selected places.

During the period of rapid extension of technical schools, local school authorities frequently had to fill out the evening class staff with skilled craftsmen from industry who had had no training in methods of teaching. It was primarily for such evening class teachers that extension courses were provided. As the number of trained teachers has increased the need for employing untrained teachers for evening classes has become correspondingly less. The need for extension courses is less than it was five years ago.

Vocational Guidance Course

In the summer session of 1931 the second part of the course for a Vocational Guidance Certificate was given. Part of the course dealt with occupational requirements, and in order that the students should have some direct experience in gathering such information, each was required to make a survey of a specified field of employment and to report the opportunities of employment, conditions of work, requirements for entrance, pay, possibilities of promotion, etc. These surveys have since been completed and copies of each survey sent to the members of the class.

Vocational Guidance Certificates were granted to those who completed the course. Information has been received to the effect that a number of those who took the course are doing constructive work in their own schools in providing educational and vocational guidance to youth.

The number of inquiries regarding admission to the course shows that a large number of teachers are interested in fitting themselves to take part in the work. Vocational Guidance appears to be a very live problem in the schools.

I cannot let this opportunity pass without referring to the contribution of Mr. M. A. Sorsoleil to the training of teachers for the technical schools.

He was inspector of vocational schools, more particularly the commercial schools, from 1921 to 1925, when he joined me in the organization of the Training College for Technical Teachers. He was recalled in 1930 to the Technical Branch of the Department of Education and in April, 1931, was appointed Assistant Director of Technical Education. Recently he has been promoted to be Deputy Minister of Public Welfare.

His work in the Training College will not soon be forgotten by the students who came under his influence. His genial disposition and smiling countenance, his interest in the welfare and progress of the students, his readiness to place himself at the service of the students at all hours and places, his ability to point out defects in the practice-teaching of the students without raising any feeling of irritation or resentment, his stimulating effect on the discouraged and flagging student, his interest in all the activities of student life, in life and in living, made a lasting impression on the students of the Training College.

His enthusiasm for the work, his buoyant spirit, his unflagging energy which seemed to be unlimited, his willingness to take on any duty or responsibility, and his loyal support and hearty co-operation in the difficult problem of working out new contribution to educational work in the Province, have had much to do with establishing the Training College on a useful and permanent foundation.

Enrolment for 1931

Extensions

A. The above table of statistics does not include the following classes established during the latter half of 1931:

(1) *Special Industrial Classes:*

In Toronto the staff of the Boys' School was increased by one and of the two Girls' Schools by three. The organization of a fourth school of this type is under consideration.

In Hamilton during September a Girls' School was opened with a staff of five, recently increased to six and an enrolment of 80, recently increased to 103. There are at the present time in Hamilton 31 junior and senior classes looking after the welfare of some 636 retarded children or 2.12 per cent. of the combined public and separate school population of approximately 30,000 pupils.

(2) *Promotion Classes:*

Auxiliary Class work has been rounded out in North Bay through the establishment of a Boys' and a Girls' Promotion Class; in each of Sarnia and Chatham through the organization of a Boys' Promotion Class in addition to auxiliary classes previously in operation.

(3) *Training Classes:*

Ingersoll 1, Lansing 1, Mimico 1, New Toronto 1, Niagara Falls 1, Orillia 1, Renfrew 1, Hamilton S.S. 1, Kitchener S.S. 1, London S.S. 1, Toronto S.S. 3.

(4) *Lip-Reading and Speech Correction Classes:*

Toronto 2.

(5) *Sanatorium Classes:*

Windsor 2.

(6) *Rural School Home Instruction Units:*

Oxford County 1.

(7) *Rural School Auxiliary Training Units.*

Halton County 1.

(8) *Rural School Sight-Saving Units:*

Waterloo County 2, Brant County 2.

There are at the present time 318 classes in operation, looking after the special needs of some 6,243 children.

B. Recent regulations extending the advantages of auxiliary education to small centres are resulting in the gradual organization of rural school units.

Two badly crippled children, one being blind as well as disabled, in receipt of home instruction, are making approximately normal grade progress.

Six children in sight-saving units are, through the provision of special equipment and instruction, being permitted to attend or to continue at school.

The auxiliary training units for backward children in rural schools have been up to the present time in an experimental stage. The multi-gradement plan with special attention to reading and arithmetic seems to be working out satisfactorily, and the time appears ripe to try out these classes on a larger scale.

Through the institution of these rural auxiliary units it is probable that provision has now been made for the education of all children within the boundaries of the Province whose particular needs require special consideration.

Texts for Sight-Saving Classes

Up until the present the large type readers printed on special paper in use among auxiliary sight-saving classes have been purchased from American sources owing to the fact that Canadian and British publications were not available. While these readers have many excellent qualities, they do not correspond with grade requirements nor appeal to the local and patriotic interest of Canadian boys and girls. The cost of publishing the Ontario Readers in large type was considered prohibitive and an experiment was tried last year in which the Public School Speller was magnatyped in five sections, multigraphed and bound. These sections were distributed according to the needs of pupils in sight-saving classes and sight-saving units and found to work so satisfactorily that the Minister has recently given his approval to continue the project with other texts. Section I of a pre-primer is now available.

Teacher Training

All teachers of Auxiliary Classes are specially trained in a five-weeks' Summer Course. The minimum qualifications of applicants are: (1) Normal School graduation; (2) three years' teaching experience; (3) a certificate from their Inspector of special aptitude for the work.

Courses are provided for teachers in: (1) Training, promotion, and special industrial classes; (2) Oral, lip-reading and speech-correction classes; (3) sight-saving, orthopedic and hospital classes. Courses (1) and (2) were given in the Summer School of 1931. Eighty-one teachers took the course for training classes, 20 for special industrial classes and 38 for oral, lip-reading and speech-correction classes, of whom 4 were from the Province of Quebec and 1 from the Province of Saskatchewan.

Brief courses were given in the Normal Schools of the Province to acquaint teachers in training with methods of dealing with auxiliary type pupils in rural schools.

The Auxiliary Class teachers throughout the Province have been organized into eight associations. The monthly or bi-monthly meetings of these groups are well attended and the teachers are stimulated by (1) discussion of problems, (2) exhibition of craft work, (3) study of new methods.

Valuable assistance is rendered by the annual O.E.A. meeting and by the Auxiliary Class Teachers' Bulletin.

The Establishment of Classes

In Ontario the establishment of Auxiliary Classes is a matter within the autonomy of local school boards. Advisory assistance, free surveys and grants equivalent to one-half the excess cost of education are provided by the Government. The placement of exceptional children is an affair which requires delicate handling. It is felt that a policy which aims at securing the good will and

voluntary co-operation of a community through explaining to the representatives of the public the need of special training for this type of child is productive of more beneficial and permanent results than measures of compulsion. The fact that the number of classes has increased from 214 in June, 1929, to 318 in December, 1931, and that only one Auxiliary Class has ever been permanently discontinued is proof of the wisdom of such policy.

Rural Classes

Upward of one-third the number of all children requiring special educational consideration are to be found in rural ungraded or semi-graded schools in which the establishment of complete or partial Auxiliary Classes is not practicable. Recently approved regulations extend auxiliary service in a modified form to these schools. The following general conditions obtain:

- (1) The teacher is not required to hold an Auxiliary Class certificate;
- (2) Eligibility of candidates must be certified to by local or Provincial officials connected with the Department of Education and approved by the inspector of Auxiliary Classes;
- (3) Modified forms of instructions are given in the regular classroom, no special accommodation being required.
- (4) Grants to a maximum of ten dollars per unit may be paid Boards as reimbursement for expenditures made during the previous year on special equipment and material. Since no special certification is demanded of the teacher and no special room accommodation required of the Board, no special grants are available toward the teacher's salary or school accommodation.

Four types of rural auxiliary units may be established.

1. *Rural Orthopedic Unit:*

Upon application by a Board a rural auxiliary orthopedic unit may be established in case of a child, otherwise eligible to attend public or separate school, who suffers under a physical handicap, as certified to by the director, Division of Child Hygiene or the local school medical officer and approved by the inspector of Auxiliary Classes, which prevents him from travelling to and from school but does not seriously interfere with his accommodation and progress in school. Chronic cardiac cases and more or less permanently crippled children who are able to attend to their own wants while at school and who have an intelligence quotient above 50 and a mental age of at least five years, may be thus provided for. Before the establishment of a rural auxiliary orthopedic unit is given approval evidence must be shown that satisfactory arrangements have been made by the Board for transporting the pupil in question to and from school.

A reimbursement grant of fifty per cent. of the cost of transportation to a maximum of forty dollars will be paid the Board annually in addition to general equipment grants to rural auxiliary units. Before a Board shall be considered eligible for such repayment grant or grants evidence must be adduced that equipment and materials have been purchased, transportation provided and transportation payments made.

2. *Home Instruction Unit:*

In school areas of less than 10,000 population upon application by the Board an auxiliary home instruction unit may be established in case of a child

otherwise eligible to attend public or separate school, who suffers under a physical handicap, as certified to by the director, Division of Child Hygiene, or the local school medical officer and approved by the inspector of Auxiliary Classes, which prevents him from attending and making progress in school. Serious cardiac cases, badly crippled children and protracted convalescents who have an intelligence quotient above 50 and a mental age of at least five years, may thus be provided for. The Board engages a qualified teacher to give during the school year not less than 100 hours of instruction in not fewer than 50 visits at the child's home.

A reimbursement grant of fifty per cent. of the remuneration given the said teacher by the Board annually is payable in addition to general equipment grants made to rural auxiliary units.

One of the teachers in the local school is usually engaged for this work and visiting hours are after four or on Saturdays. Arrangements, however, may be made with any qualified teacher to give instruction during hours convenient to both parties.

The regular courses of public and separate school studies are pursued up to Form IV. Should Form V work be undertaken it is advisable that a certain amount of vocational guidance and vocational education be introduced according to the particular needs of the child in question. Much will depend upon the nature of the disability, its probable permanency, family conditions and even the location of the home. It will probably be advisable in all cases for the teacher to consult with the local inspector and the inspector of Auxiliary Classes before arranging a vocational programme.

3. Sight-Saving Unit:

Upon application by a Board a rural auxiliary sight-saving unit may be established in case of a child, otherwise eligible to attend public or separate school, whose sight, as certified to by the director, Division of Child Hygiene, or the local school medical officer and approved by the inspector of Auxiliary Classes, prevents him from making satisfactory progress even when he is provided with proper glasses and placed in a front seat or whose sight would be further impaired by using the ordinary text books and other means of instruction.

Upon the application for the establishment of a sight-saving unit being approved, the secretary of the Board, teacher and local inspector are furnished with a list of the equipment and materials to be supplied together with an outline of the methods of instruction to be pursued.

4. Rural Training Unit:

Upon application by a Board a rural auxiliary training unit may be established in case of a child who is very backward, psychopathic or mentally defective, but who can be educated or trained and whose mental age is not less than the legal school age.

Upon receipt of an application from a Board the teacher in charge of the pupil in question is furnished with Forms A.C. 3, A.C. 4, A.C. 7. She is requested to fill out the teacher's confidential report on Forms A.C. 3 and A.C. 4, according to instructions given in Form A.C. 7 and where the services of a school nurse are not available to fill in the nurse's confidential report to the best of her ability without undue interrogation of pupil or parents. The report of a mental examination administered by the local inspector or an officer from the Department of Education is recorded on Form A.C. 3 and a summary of the results entered on Form A.C. 4. Form A.C. 3 is forwarded the inspector of Auxiliary

Classes for approval. Form A.C. 4 is retained by the teacher for her confidential information.

In rural areas it is of the utmost importance that the establishment of auxiliary training units be conducted with discretion. The expression "sub-normal", "mental defective", "direct-learning pupil" or other term which might in any way mark the pupil as a person distinct from other children must never be used.

Upon approval being given the establishment of a rural auxiliary training unit the pupil is re-classified according to a multigrading scheme somewhat resembling the vertical system of group classification employed in regular training classes. In writing, art, nature study and hygiene he is graded with pupils of approximately his own age, with the understanding that he exert every effort to maintain his new ranking. Save in case of very backward children history and geography may usually be taken with the grade one below that of his own age group. In these two subjects the teacher must not expect too much from the pupil in the matter of written work. He is frequently able to give a good account of himself in sand-table, plasticine, constructive work, freehand drawings and other modes of manual expression and may through ability in these directions prove a help rather than a hindrance to the grade in which he is placed.

Arithmetic, reading, spelling and composition usually present the most serious obstacles to progress. Should the pupil exhibit proficiency in one or more of these departments he may, when practicable, be classified with his own age grade or with the grade immediately below. Where such classification is not feasible he should be taken in a class by himself.

A three-fold purpose is served by this multigrading process; (1) either a junior grade is relieved of the presence of a distractive over age member or a senior grade is relieved of a drag upon its progress, (2) the pupil in question is better fitted to the harness at all points, given opportunity to advance at a maximum rate along lines of greatest proficiency and to receive special attention along lines of greatest deficiency, (3) the development of an inferiority complex through continued association with small children in a junior grade or through repeated failure in a senior grade is overcome and the development of a sense of self respect through the successful accomplishment of adequately adjusted activities rendered possible. To this latter end it is advised that the pupil be assigned certain specified duties about the school which have to do however with the management of things and not with the ordering about of other children. Cleaning the blackboard, looking after window boxes, etc., are suggested. To this same end a certain amount of manual work has been introduced into the programme in order that the pupil may have opportunity to display as well as cultivate his ability along this line.

In the five special subjects, arithmetic, reading, spelling, composition, manual training and household science the courses to be pursued and the methods to be followed will in general conform with the outlines given for Auxiliary Training Classes.

H. E. AMOSS,

Inspector of Auxiliary Classes.

Toronto, February 29th, 1932.

APPENDIX I

REPORT OF THE INSPECTOR OF MANUAL TRAINING AND HOUSEHOLD SCIENCE

Manual Training Centres

Manual Training centres to the number of one hundred and thirty-five are now in active operation distributed through the following towns, cities and villages: Brantford, Bridgeburg, Chatham, Fairbank, Guelph, Hamilton, Ingersoll, Kingston, Kitchener, London, North Bay, Orangeville, Ottawa, Owen Sound, Pembroke, Peterborough, St. Catharines, Sarnia, Stratford, Toronto, Walkerville, Waterloo, Windsor, Whitby, Woodstock, Swansea and Humbercrest. Three new centres were opened in Toronto.

Household Science Centres

Household Science centres to the number of one hundred and thirty-three are now in active operation distributed through the following towns, cities and villages: Brantford, Bridgeburg, Brockville, Chatham, Cobourg, Fairbank, Guelph, Hamilton, Ingersoll, Kingston, Kitchener, London, North Bay, Ottawa, Owen Sound, Port Perry, Peterborough, St. Catharines, Sarnia, Stratford, Toronto, Walkerville, Windsor, Woodstock and Waterloo. Three new centres were opened in Toronto during the year.

Character of the Work in Manual Training

During the year there has been satisfactory progress not only on the part of the teachers in their work in the class rooms but also on the part of the boards in providing suitable accommodation and equipment. The work of the pupils bears testimony to the attention that has been paid to the care of the equipment. In the character of the instruction the improvement has been quite marked. The classes for teachers taught by well qualified and experienced instructors have contributed very considerably to this improvement.

In some schools many interesting features have been noted, the work in home mechanics including the following and other examples of good work: making some concrete, repairing furniture, soldering, repairing a mortise lock, glazing a sash, wiring a bell, hanging a door, reading a water, gas or electric meter, making window screens, reseating a cane-bottom chair, sharpening and adjusting a lawn mower.

The aid now being given to Manual Training instructors by different manufacturers of lumber, finishes, tools, machines, etc., has grown to a remarkable degree. Charts, working drawings, processes of tool manufacture, blue prints, books of instruction, etc., are available for the use of both pupils and teachers for the asking and teachers generally are making the fullest use of them.

Another feature of the work which is receiving increased attention is the reading and study of technical or semi-technical literature. In some schools "Popular Mechanics," "Woodworker," radio magazines and publications dealing with construction, tools, timber, etc., have been placed within reach of the pupils. The aid of the teachers is constantly being sought by them in their efforts to make various objects outlined in these publications. The boys are encouraged to keep scrap books in which are kept very interesting articles and

illustrations culled from newspapers, magazines, etc., dealing with constructive problems and the collections made by some of the boys are exceedingly useful and informative. In some schools an interesting combination of wood and metal is being used in the making of various objects such as escutcheon plates, hinges, corner pieces and other decorations.

The requirements of the large towns and cities have now been largely met and adequate attention should now be paid to the requirements of the smaller towns and villages. These requirements might be met by a combination of the following methods:

- (1) Grouping of Centres.
- (2) The provision of teachers with a double qualification.
- (3) Co-operation between the manual arts and industrial education.

1. *Grouping of Centres.* It should not be difficult to form a group of three or four towns within easy reach of one another, each having its own Manual Training and Household Science centres and equipments and each paying its share of the special teachers' salaries, according to the time spent in each place by the teacher. The Government grants would materially aid in providing the equipment in each of these centres. Now that radial and bus lines are being extended rapidly throughout the Province, little difficulty would be experienced by the teachers in moving from place to place. This plan has been proposed in one or two localities, but it has not yet been possible to secure complete co-operation largely owing to conflicting interests which are often more imaginary than real.

2. *Teachers with a double qualification.* The small High School cannot provide sufficient pupils to employ the whole time of a Manual Training teacher or a Household Science teacher, even when the elementary schools are included in the instruction. If a small group of teachers could be qualified for teaching the academic subjects of the High School curriculum in addition to Manual Training or Household Science, the introduction of these subjects would be much easier and the whole time of the teachers could be occupied. The lack of such doubly qualified teachers has been felt in many schools and Temporary certificates for teaching Household Science have had to be granted.

3. *Co-operation between manual arts and industrial education.* This may involve a revision of the High School Course of Study in Manual Training, the provision of additional activities and the inclusion of new materials. Formal woodworking is in danger of becoming somewhat commonplace and its newness, attractiveness and educational value have to some extent been lessened, particularly in classes taught by teachers lacking vision, initiative and resource in devising new projects. Industrial conditions have changed and have relegated wood-working particularly by hand to a less important position.

In order to meet these new conditions and to provide the vocational training combined with Manual Training, the provision of a new type of equipment will be necessary and a departure from the traditional equipment will have to be made. The type of equipment may be that known as the general shop now being adopted in many of the Junior High Schools of the United States. Here provision may be made for wood-work, sheet metal work, plumbing, electricity, forging, auto mechanics, machine shop work, and draughting. An arrangement should be made so that the shop may be used both for ordinary High School

pupils and pupils taking a vocational course. The adoption of some such plans as above outlined would do much to meet the needs of these small places that cannot employ the whole time of a Manual Training teacher or a Vocational instructor.

Character of the Work in Household Science

The Household Science work carried on in the Public Schools has progressed much as in previous years. The elementary work in sewing is done in the lower grades by the class-room teacher who has received instruction in this subject in the Normal School while the work in foods and more advanced sewing is carried on by teachers who in addition to the Second Class certificate hold a Household Science certificate obtained on the completion of the one-year course at the Ontario College of Education or of the two-year course at the Macdonald Institute, Guelph.

In the larger cities such as Toronto, Ottawa and Hamilton, the work in the lower grades is thoroughly organized and taught. A definite stated time is provided on the time table and the course is well graded. In these places the work is carefully supervised and the teachers of the grade classes receive instruction as to the kind of work and methods. In the smaller places the work is not so well organized with the result that it is left largely to the initiative of the individual teachers, but a large amount of good practical work is being done. The centres previously enumerated are all well equipped and the instruction being given is now made as practical as possible to the homes in the district where the instruction is being given. Every effort is made to encourage home practice and the pupils in a large number of cases bring their home problems to the teacher of Household Science for solution. The parents, too, are making greater use of these classes by seeking the advice of the Household Science teacher. Many schools have instituted a parents' day each term when they are invited to visit the classes and see their children at work. On these occasions refreshments prepared by the children are served and in this way the interest and co-operation of the home are secured. The practice is growing of cooking in larger quantities instead of using the small amounts that were previously the custom. The family meal is being made the basis of instruction and in this way more direct contact is made with the home. Many teachers require the pupils to give a short account of the work they have done in the home during the previous week, and it is surprising to hear the amount of help they have been able to render their mothers. Attention is being paid to the right kind of food, health and weight, and many pupils have received considerable benefit in this connection. Attention is being given not only to cookery in these classes but also to sanitation, general care of the home, decoration, manners, the right kind of dress and the ability to perform many mechanical operations that are necessary in the daily routine of housekeeping.

Where there is a well planned course of work organized for the Public School, the work that can be done in the High School is of a much more advanced character, owing not only to the previous training of the pupils but also owing to their greater maturity. The work in both Public and High Schools is obviously determined by the limited amount of time that can be allotted to it. At the most forty lessons of $1\frac{1}{2}$ or 2 hours a week can be devoted to this subject and often very much less. In their anxiety to cover the ground, the temptation to attempt too much is very great. The aim of the teacher should be to have what is taught mastered and retained rather than to undertake too extensive a course.

Rural Schools

Probably the greatest development that has taken place has been in connection with the rural schools. Manual Training and Household Science have made considerable progress here, and especially when it is remembered that these schools are working under great difficulties in introducing new subjects and new equipments. The enthusiasm and self sacrifice of the rural school teachers in overcoming obstacles and giving of their best is worthy of the highest praise. It is not possible, of course, nor is it desirable to attempt to equip these schools for the teaching of Household Science and Manual Training in the same manner as the fully equipped centres in urban schools. Four types of special equipments were designed for rural schools and of these one may be chosen to suit the particular conditions required and with which very satisfactory work may be done.

The best method of approach to Household Science in the rural school is through the medium of the hot noon-day lunch or the preparation of one or two hot dishes to supplement the lunch brought from home. Owing to the fact that many pupils live far from the school, it is impossible for them to go home for the mid-day meal, and they are thus dependent upon lunches which they bring with them. Very frequently the pupils are allowed to eat their lunches where and how they please, and the method chosen is not conducive either to comfort or to health. In fine weather they do not wish to lose any time from their games, and so they eat their food while playing, or they bolt it in order that they may get to their play more quickly. In severe weather they crowd around the steps or the stove and do not hesitate to scatter crumbs and crusts. In one case a teacher has been seen holding a sandwich in one hand and writing on the black-board with the other. There are now over 1,200 schools serving at least one hot dish at the noon lunch, and the almost unanimous experience of the teachers in these schools is that the health of the children is improved, and they are able to do better work in the afternoon and that their attendance is more regular. One outstanding advantage is that the pupils are under proper supervision during the noon hour and moral and physical injury is prevented. The extent to which this work is adopted and its general character when it is introduced depend very largely upon the advocacy and interest of the Public and Separate School Inspectors, Women's Institutes and various Home and School Clubs which have been largely responsible in many cases for the introduction of these subjects and to their continued interest is to be attributed much of the success. The number of classes in various outstanding inspectorates are as follows: Bruce W. 35, Lincoln 65, Hastings S. 33, Hastings N 24, Peterborough E. 44, Simcoe E. 37, Leeds and Grenville (2) 50, Peel 35, Dufferin 34, Northumberland and Durham 44, Carleton E. 34, Wellington S. 54, Bruce E. 36, Renfrew S. 53, Wentworth 74, Lanark (2) 50, Dundas 33, Prince Edward 33, Grey N. 34.

There is a total of 1,465 rural schools with 1,726 classes teaching Household Science and 1,556 rural schools serving at least one hot dish at the noon lunch. Fifty-six Separate Schools with 100 classes are teaching the subject and 94 serving a hot dish at noon.

There are 133 rural schools with 307 classes being taught Manual Training; sixty of these are in Wentworth County.

Training of Teachers

The schemes now in operation for the training of teachers of Manual Training and Household Science are working remarkably well. The certificates issued

in each subject are of three grades: (1) Elementary; (2) Intermediate; (3) Specialist. The Intermediate certificate was formerly called "Ordinary" but was changed to "Intermediate" as being more logical and satisfactory.

The Elementary certificate is obtained by attendance at two Summer Sessions. These courses are now given at the Ontario Training College for Technical Teachers at Hamilton, and have up to the present been well attended. Summer Courses have also been held in Ottawa. In order to give opportunity to rural school teachers to obtain this certificate while actually teaching, Saturday Classes have been conducted in Hamilton and Toronto. The classes now in progress are well attended, some of the teachers driving fifty miles and more every Saturday to receive instruction.

The Intermediate certificate in Manual Training is obtained by attending for one year at the Ontario Training College for Technical Teachers in Hamilton, and that in Household Science by a one-year course at the Ontario College of Education or a two-year course at the Macdonald Institute, Guelph.

The Specialist certificate in Manual Training is obtained by attendance at three Summer Courses held at the Ontario Training College for Technical Teachers, Hamilton. These courses which continue for five weeks are open only to the holders of the Intermediate certificate.

Specialist certificate in Household Science is obtained through a four-year course at the University of Toronto followed by the prescribed course of training at the Ontario College of Education.

ALBERT H. LEAKE,

Inspector of Manual Training and Household Science.

Toronto, December, 1931.

APPENDIX J

REPORT OF THE PROVINCIAL SCHOOL ATTENDANCE OFFICER

The past year has been marked by growth in unity of purpose and action in the field of attendance control. In any effective system it is clear knowledge of the conditions to be met, and careful combination of forces to a well defined end that count. In the problem of perfecting attendance every agency must play its part—the parent, the teacher, the special officer, the inspector, as well as the directing authority. The home must be prepared to furnish for the child the natural incentive, the necessary freedom, and the initial control. In the majority of cases the home unaided may be relied upon to meet the need. At times it may fail to function, but in such case the situation cannot be allowed to go by default. Other agencies must take up the charge. The state must step in for its own protection as well as that of the home. The teacher is the key factor in the process. He mediates between the home and the school on the one hand and between the school and the special officer on the other. He alone knows the facts, weighs the conditions and sets the machinery in action to meet the needs. Where his direct mediation fails as between home and school, he calls supporting forces to his aid. In so far as each worker knows his task and performs his part, hand in hand with his fellow-worker, with promptness, efficiency and tact, will the desired end be attained—a fair chance for every child in the land in keeping with his capacity and his needs.

The present industrial depression has brought certain school topics into the arena of popular discussion. Among other matters the cost factor in education and associated conditions have come under careful scrutiny. Such questions as the following naturally arise: “How does enrolment to-day compare with that of former years?” “Which school panel shows the greatest increase, and how much?” “What percentage of provincial population is represented in each panel as compared with former years?”

The following Table furnishes the answer to these questions on the basis of a ten-year spread:—

TABLE I
Comparative Statement of School Enrolment vs. Provincial Population

	Enrolment		% of Provincial Population		% of Gross Increase
	1920	1930	1920	1930	
1. Elementary Schools:					
(a) Public Schools.....	488,091	548,874	18.42	17.55	12.96
(b) Separate Schools.....	76,881	109,661	2.90	3.45	40.96
Total.....	564,972	658,535	21.32	21.00	16.77
2. Secondary Schools:					
(a) Collegiate Institutes and High Schools	33,036	64,964	1.24	2.07	96.75
(b) Vocational Schools.....	4,790	29,095	.18	.92	507.40
(c) Continuation Schools.....	5,126	10,534	.19	.33	105.50
Total.....	42,952	104,593	1.61	3.32	143.40
3. Evening Schools:					
(a) Public Schools.....	843	3,369			
(b) Collegiate Institutes and High Schools	5,042	3,563			
(c) Vocational Schools.....	26,527	44,431			
Total.....	32,412	51,363	1.22	1.31	58.50
Grand Totals.....	640,336	814,491	24.2	25.9	27.4

A careful survey of the foregoing table reveals the following facts:

- (1) The elementary school enrolment stands steadily at about 21 per cent. of the provincial population.
- (2) The secondary school enrolment shows a striking advance. In the ten-year period it increased to two and a half times the original figure and doubled its ratio to Provincial population. The largest increase was in Vocational Schools. In 1920 they were just getting under way and by 1930 showed six times the former enrolment.
- (3) The total enrolment for all classes of school shows that 25.9 per cent. of the Provincial population are now in school as compared with 24.2 per cent. in 1920.

Table 2

Comparative Statement Showing Trend to Urban Centres

	1910	1930	Percentage of Total Enrolment	
			1910	1930
Elementary Schools:				
Rural Enrolment.....	233,092	250,304	50.76	38.01
Urban Enrolment.....	226,053	408,231	49.24	61.89
Total.....	459,145	658,535	100.00	100.00

In 1910 the elementary rural school enrolment was practically on a par with urban enrolment, with but a slight predominance in favour of the rural. In 1930 the ratio was 38 to 62, a turnover in favour of urban centres of almost 13 per cent., or the equivalent of one-eighth of the population. It is to be remembered that these figures represent not only migration within the Province, but immigration from outside its borders. The change is essentially more pronounced than the figures show, since the rural totals include not only those resident in the purely rural sections of the Province, but those of the metropolitan areas as well which are virtually urban and which should be so classed for comparative purposes.

Standard of Attendance

There has been a very marked improvement in attendance standards throughout the past year. To this change three factors have, in the main, contributed—(1) unusually favourable climatic conditions prevailing throughout the year; (2) comparative freedom from child epidemics; (3) more effective supervision under the new system of child accounting. No single cause and no combination of causes makes such inroads on school attendance as illness, especially that of an epidemic nature. In 1930, on the average, over 30,000 pupils per day were absent owing to this cause. A realization of the cost of communicable diseases, not only in the way of undermining the physical stamina

of the child but in the impairment of the efficiency and progress of the school as a whole, should stimulate organized public effort to get the situation under control and, as far as possible, overcome the loss.

For clearer definition, causes of absence are now ear-marked under salient heads as Illness, Home Help, Parental Neglect, Physical Obstacles, Truancy and Privation. Only unlawful absence under these heads is reported, which forestalls indiscriminate and wasteful effort in reporting and follow-up work. These headings give the key to remedial action which may rest with the attendance officer or with the nurse or medical officer, or with the child protection or relief agency, according to the basic nature of the problem. The system, therefore, gives the maximum of success with a minimum of effort on the part of controlling forces.

The following comparative statement shows the high standard of attendance efficiency attained by all classes of elementary schools in the years 1930 and 1931 and the substantial increase made in one year which can rightly be attributed to the closer checking and follow-up work of the new attendance system:

Comparative Statement of Attendance Averages, 1930 and 1931

	Average Per Cent. for 1930	Average Per Cent. for 1931	Per Cent. Increase
Rural Schools			
County Schools.....	87.83	89.30	1.47
District Schools.....	83.43	87.71	4.28
General Average.....	87.11	89.05	1.94
Urban Schools			
City Schools.....	90.67	91.62	.95
Town Schools.....	89.05	92.48	3.43
Village Schools.....	90.72	91.95	1.23
General Average.....	90.56	91.84	1.56
General Average for all schools in the Province.....	89.10	90.81	1.71

For the first time in the history of the Province the schools as a whole have passed the 90 per cent. mark. From the purely attendance point of view, the increase of 1.71 per cent. in one year means that in 1931 as compared with 1930, 9,500 pupils more were receiving an adequate education in our elementary schools. The added regularity must necessarily be reflected in a very marked way in teaching and general school efficiency.

Pupil Migration

Change of residence furnishes a serious problem for both teacher and attendance officer because of the necessary break in school connection. When the change takes place within the section or municipality the break is usually brief. When it involves change of section or municipality it is indefinitely

prolonged. The discovery of the newcomer in the large centre or in the rural district is largely a matter of chance. Time is lost in resuming school connection and in realignment in the classes, owing to the lack of reliable landmarks to guide the teacher in his grading. How widely pupil migration operates in Ontario is shown in the following table, covering the year 1930:

Table 3

	Total Number of Pupils Transferred	Total Number of Teachers	Average Num- ber of Transfers per Teacher
Rural Schools.....	23,305	7,765	3.0
Urban Schools.....	25,142	9,297	2.7
Total.....	48,447	17,062	2.8
Areas of Maximum Transfer			
Windsor, Walkerville and Sandwich.....	2,483	408	6.0
Township of York.....	4,752	945	5.0

Urban conditions are much more stable than rural, since out of a total of 408,424 pupils enrolled, only 25,142, or 6.1%, were transferred, whereas in rural areas out of 250,304 pupils 23,305, or 9.3%, changed residence.

Table 4

**Comparative Statement of
Enrolled Adolescents (14 and 15 years), 1929 and 1930**

	Form I	Form II	Form III	Form IV	Form V	Totals	
						1929	1930
Elementary Schools, 1929..	497	1,865	11,552	38,863	4,116	56,893
" " 1930..	326	1,098	7,716	27,312	2,636	39,088
	1st and 2nd years		3rd and 4th years		5th year		
Secondary Schools, 1929....	34,353		8,826		216	43,395
" " 1930....	35,017		9,180		292	44,489
					Totals...	100,288	83,577

It will be noted from the above table that in 1930 a marked reduction in the list of elementary school pupils of adolescent age is shown as compared with that of the year 1929. This is accounted for by the fact that double enrolments, which in the 1929 list figured in the total, are now eliminated. The 1930 total, therefore, represents more truly the actual condition. The 83,577

adolescents (14 and 15 years of age) in our schools were found in the proportion of 47 to 53 in elementary and secondary schools respectively, an altogether undue proportion for the former class of school.

Table 5

Withdrawals from School of Adolescents (14 and 15 years) 1930

Elementary Schools	Form II	Form III	Form IV	Form V	Total
Rural.....	529	1,757	5,773	1,064	9,123
Urban.....	220	1,134	2,634	129	4,117
Total.....	749	2,891	8,407	1,193	13,240

Taken in conjunction with above Table No. 4, it is seen that 13,240 adolescents out of a total of 39,088, or about 33%, retired permanently from school. Since most of these left prior to reaching the High School Entrance standard, it is conceded that the majority were not making normal headway and were awaiting the arrival of the school leaving age. Whatever their native capacity, they were quite inadequately grounded in the rudiments of education and must inevitably confine themselves to a place in the unskilled work of the world.

TABLE 6

Comparative Statement of Employed Adolescents, 1929 and 1930

	Child Employment (under 14 years)		Adolescent Employment (14 to 15 years of age)					
	Six Weeks' Permits		Home Permits		Employment Certificates		Totals	
	1929	1930	1929	1930	1929	1930	1929	1930
Rural Schools.....	1,188	647	302	385	479	320	781	705
Urban Schools.....	177	301	886	984	3,888	2,831	4,774	3,815
Totals.....	1,365	948	1,188	1,369	4,367	3,151	5,555	4,520

The Attendance Acts make liberal allowance for exceptional conditions. The natural place for the child of school age is at school, and the home is expected to adhere to this principle as far as possible. But at times abnormal conditions occur. Illness or accident in the home, emergent needs on the farm, impairment or loss of income, may force the child into the ranks of the immature workers. To obviate undue hardship in the home, the Attendance Acts make provision for temporary or permanent release from school. For children under fourteen

years of age a maximum of six weeks' leave of absence is allowable, and for adolescents permanent withdrawal with part-time school connection of one day a week, where this is practicable.

The above table shows that 948 pupils were granted temporary release in 1930, a drop of 417 from last year's total. In the case of adolescents, 4,520 working permits were issued, or 1,035 fewer than in 1929. The drop in each case is readily accounted for. The demand for economy in times of stress narrows the labour market for the wage-earner, and unskilled labour is the first to be thrown out of employment. In the natural course of things the unemployed child finds his way back to school. This condition is reflected in the call for increased accommodation throughout the Province.

TABLE 7

Part-Time Classes for Adolescents, 1930-1931

	No. of Teachers		No. of Pupils		Total Enrolment
	Academic	Vocational	On Home Permits	On Employment Certificates	
Brantford.....	1	8	23	37	60
Galt.....	1	5	5	54	59
Guelph.....	1	5	15	41	56
Hamilton.....	3	6	148	264	412
Kitchener.....	5	9	54	84	138
London.....	2	3	26	31	57
Toronto:					
Vocational and Commercial Schools.....	14	39	126	413	539
Public Schools.....	2	..	151	196	347
Grand Totals, 1930.....	29	75	548	1,120	1,668
Grand Totals, 1929.....	24	48	475	1,834	2,309

The above table shows a drop in the number of part-time pupils corresponding to the reduced number of employed adolescents shown in Table No. 6. Out of a total of 4,520 pupils granted school exemption, 1,668 were enrolled in part-time classes in the seven centres where these classes are organized. In rural areas and smaller centres of population, part-time organization is impracticable. The maintenance of school connection in this way renders a service to the pupil far beyond the measure of the mere time spent. The chance for improvement remains, and he profits widely by contact with his fellow pupils under a sympathetic leader who is always available for advice in his daily problems. A direct example is to be found in the Public School part-time classes of the City of Toronto, where the pupils have not only passed the High School Entrance examination through part-time work, but, on their own initiative, are voluntarily pursuing advanced studies in night classes under Principal Watt, even after the leaving age is reached.

TABLE 8
Judicial Enforcement of Attendance

	Complaints re Violation of Attendance Acts	Number of Convictions			Total Convic- tions
		Re Illegal Employment of Children	Re Illegal Employment of Adolescents	Parental Negligence	
Urban Schools:					
1929.....	668	12	151	176	339
1930.....	665	28	84	19	131
Rural Schools:					
1929.....	112	32	25	30	87
1930.....	77	30	10	4	44
Total: 1929.....	780	44	176	206	426
1930.....	742	58	94	23	175

The total number of complaints laid, and especially the number of convictions registered, show an appreciable decrease in 1930 over 1929. In 1929 54.6% of the complaints issued in convictions; in 1930 only 23.5%. Parental negligence is becoming less and less a contributing cause to delinquency. The convictions on this count were only one-sixth of the total for 1929. The Attendance Acts are being successfully administered in such a way as to secure efficiency with the rarest possible appeal to compulsory measures.

Meeting Unusual Conditions

Two institutions of a specialized nature are doing large service by way of meeting conditions beyond the scope of the regular schools—viz., Home Correspondence and the Railway School Car. The former serves hundreds of isolated homes far and wide throughout the Province, and the latter hundreds of miles of territory contiguous to the railway lines in Northern Ontario which would otherwise remain unprovided. The School Car operates largely among non-Anglo-Saxons, and a unique return from the service rendered to homes and children is the large number of adults who are voluntarily assuming the rights and responsibilities of Canadian citizenship.

Grateful acknowledgement on the part of the Department of Attendance is accorded to the Public Health units, the Children's Aid Society, the Big Brothers and Sisters, the Neighbourhood Workers, Probation Officers of Juvenile Courts and other organizations whose ready assistance has made a large contribution to the attendance service.

J. B. MACDOUGALL,
Provincial School Attendance Officer.

Toronto, December 31st, 1931.

APPENDIX K

REPORT OF THE ACTING INSPECTOR OF PUBLIC LIBRARIES

The outstanding features for the year are as follows:

Circulation of Books

The Annual Reports of the Libraries for the year show a remarkable increase in book circulation. This increase although very pronounced in the larger centres is quite general throughout the province and bears evidence of the outstanding influence of the Library.

New Libraries

Seven new libraries were established during the year. Six are of the association type, and are situated at Beachville, Belmore, Burnstown, Castleton, Schomberg and Warren Park, the free library being the Mountain branch of the Hamilton Library System.

The name of the library at Marksville has been changed, by special permission, to Hilton Beach, and the former association library at Fonthill has been made a free library as under Part 1 of the Public Libraries Act.

Ontario Library Review

"The Ontario Library Review" has been issued quarterly and as a result of the co-operation of all the contributors has been mailed during the month of issue.

Library Institutes

The extension of aid given by the Minister of Education for the re-establishing of Public Library Institutes during the year can best be estimated by the many letters of appreciation, and the verbal comments at the meetings on the inspiration that they have been to the library workers of the Province. The meetings were entirely under the direction of the Public Libraries Branch, and the programmes arranged to meet the needs of the smaller libraries.

During the year, five institute meetings were held in the following places: Hamilton, Owen Sound, North Bay, Orillia and Peterborough. These, with the two held late in 1930 at Ottawa and Walkerville, completed the cycle, and now every library in the Province has had the opportunity of sending a representative to one of these meetings. The Government paid all necessary hotel and travelling expenses of one delegate from each library.

The programme for the afternoon session consisted mainly of papers and addresses on the different phases of library work. At the close of the meeting, time was given for the answering of questions on any problem that presented itself.

The evening session consisted of addresses by prominent speakers. After the meeting an informal reception was held so as to give opportunities for the delegates to become acquainted with each other.

On the following morning the meeting took the form of a round table conference, each one present taking part in the discussion, and a great

deal of instruction and helpful information was received. There is no doubt that all returned to their respective duties better enabled to carry on what is in some cases a rather thankless task.

Travelling Libraries

This important section of the Public Libraries Branch has received a large share of patronage during the year. Residents in small places where there are no library facilities have availed themselves of the opportunity to secure wholesome books at a minimum of expense. The utmost care is exercised with a view to ensuring the circulation of only the best books of all classes.

Libraries Visited

Nearly one hundred libraries have been visited during the year. At each visit some of the members of the library board were met, and the books of the library gone over and helpful advice and instruction for the betterment of library service to the community were given. It is largely missionary work, and creates the feeling that even the very small library has its part in the educational work of the Province.

New Library Buildings Opened

A splendid library building was opened at Lambeth on July the 24th. Lambeth is a small village of 480 people and is situated near London. The building is twenty by twenty-eight feet and is of rug brick construction on cement block foundation. It is equipped with electric light, water and sanitary arrangements, and is heated with natural gas. The inside is finished in natural oak, and has a beamed ceiling. A full description of the building was given in the August number of the "Ontario Library Review."

The Runnymede branch of the Toronto Library System was opened late in 1930. It is a definite departure from the "institutional" type of library building. It is in a residential neighbourhood and has achieved both a domestic character and an extremely Canadian note in design.

A County Library System

There is perhaps no phase of library work that is engaging the attention of the library world to the same extent at present as that which brings reading opportunities to rural communities.

With the large area of sparsely settled districts in our Province, the problem is one that calls for a great deal of thought and consideration, so that good reading at a small cost may be within the reach of all who seek it. It is a situation that demands a careful working out of the best methods to produce the best results.

Successful county libraries cannot be established or operated without proper county library laws. The funds for the support of a county library should come from a general county fund which would be provided by a special tax levy for library purposes. This rate might vary from fifty cents to one dollar per capita. The Government grants might be increased so as to assist in the experimental stages of development.

I would respectfully suggest that a committee of three be appointed, consisting of a representative appointed by the Minister, a representative from the Ontario Library Association, and a third member to be selected by the other two representatives. The duty of this committee would be to formulate plans,

make a survey, and submit a report covering the best methods for inaugurating a county library system in Ontario.

Classifying and Cataloguing

A number of library boards during the year have availed themselves of the services of the Public Libraries Branch, in securing instruction for classifying and cataloguing the books in their library. The service is given without cost to the board, and when necessary, return visits are made so as to ensure the work being properly carried through.

Libraries Removed from the List

During the last two years, and after thorough investigation, it was decided to weed out those libraries that are chronic weaklings. A library that cannot or will not comply with even a very elastic interpretation of the Public Libraries Act and Regulations, after constant entreaty and advice, should be removed from the list of active libraries of the Province. In some cases the libraries are already closed, and in others they are in such poor condition that they should not be rightly classed as a public library. The books in nearly every instance are quite old and worn.

The following are to be removed from the list this year: Craighurst, Hawkesbury, Kinburn, Matilda, Metcalfe, Middleville, Riversdale, Russell, Shakespeare, Tilbury and Vankleek Hill.

Printing Proceedings of the Ontario Library Association

In the May number of the "Ontario Library Review" there were printed the proceedings of the Ontario Library Association's thirty-first annual conference. It consisted of forty pages, covering the speeches and general business of the meetings. If the same courtesy is extended by the Department another year, I would respectfully suggest that the proceedings be printed separate. This would, I am sure, be a more satisfactory arrangement for all concerned.

Donation of Books to Construction Camps

The construction camps that have been opened and are being operated by the Government in the northern part of the Province, have given the Public Libraries Branch an additional opportunity to render library service.

Thirty cases of books, containing in all, 5,890 volumes, were sent to the camps under the direction of the Hon. W. G. Martin, Minister of Public Welfare.

The collections were well balanced and consisted of books of an educational as well as an entertaining character and there is no doubt they will be appreciated by the men during the long winter evenings in camp.

American Library Association

The Acting Inspector was instructed to attend the annual meeting of the American Library Association which convened at New Haven, Conn., in June last. At this conference addresses were given relative to county libraries as operated in different states of the Union, and other matters of general library interest. It was his privilege to meet many of the outstanding workers in the library field of Canada and the United States, and much information was gleaned and contacts made that will be of lasting value.

I present herewith a statement of the statistics of the Public Libraries of the Province with a statement of the Legislative Grants paid.

S. B. HERBERT,

Acting Inspector of Public Libraries.

Toronto, February 11th, 1932.

APPENDIX L

REPORT OF THE SUPERINTENDENT OF THE ONTARIO
SCHOOL FOR THE BLIND

I have the honour to transmit herewith the Annual Report of the Ontario School for the Blind for the year ended October 31st, 1931.

Attendance

The average attendance for the school term ending June 1931 was 130. 125 pupils were enrolled at the opening of the term in September, 1930, and nine pupils entered during the session, making a total of 134—75 boys and 59 girls. The total registration from October 31st, 1930, to October 31st, 1931, was 156—one less than in the preceding year. School opened in September 1931 with 124 pupils in residence.

Of the 134 pupils who attended during the year, 83 were from Ontario, 13 from Alberta, 12 from Manitoba, and 26 from Saskatchewan.

Thirty-two pupils did not return to school in September, 1931, of which number 18 were boys and 14 were girls. Of this number—

13 completed their course.

4 left to continue their studies in Public and High Schools.

2 entered sight-saving classes, one in Toronto, the other in Ottawa.

2 had too much sight.

2 found suitable employment.

1 moved to British Columbia.

1 left on account of ill-health.

4 were unsuitable.

3 gave no reasons for not returning.

Changes in Staff

With one exception, the teaching staff of the Ontario School for the Blind remains the same as last year. Miss Emma Moffitt, B.A., literary teacher, resigned to accept a position in the Brantford Collegiate Institute, and her place was filled by Miss Jean McClure of Brantford.

School Activities

To bring the work of the school before the general public, different exhibitions, concerts and athletic contests are held during the term. Early in June the Manual Training Department holds an exhibition and sale of the work done during the session. This department always makes an excellent showing. This year, two blind boys made a bird house which they sent to Jack Miner. Mr. Miner was delighted with the gift, and in acknowledgment sent the two boys autographed copies of one of his books. He stated in a letter that the martins had taken up housekeeping the day after the bird house had been placed in position behind his residence. A duplicate of this bird house was shown at the Toronto Exhibition in September where it received a special award.

An exhibition of the work done by the girls in the knitting and sewing departments is also held towards the close of the term, and afternoon tea is prepared and served by the girls in the cooking classes.

The Physical Training Department holds an Annual Field Day. Before the day set for this, there are elimination contests in the various events, races, broad and high jumps, rope climbing and throwing the basketball, etc. On Field Day the four pupils who lead in each group contest for final honours. This is always an exciting time for the pupils, both for those who are participating and those who are spectators. The trophies won are presented the night of the closing concert in June.

Every other Tuesday during the year concerts are given in the Assembly Hall by the pupils. Plays, essays, recitations and musical numbers are presented. These concerts serve as training for the regular June and Christmas concerts which are performed before the public.

At the Christmas concert a short play was presented which received very favourable comment in the press. The June concert, held at the end of the term, is usually a more finished production. The pupils are in better form and excellently trained. This year a male quartet was one of the chief attractions. Part songs of rare beauty were rendered by members of the senior choral class. This work is under the direction of our musical director who last year took a Canadian choir to England to compete successfully in the famous Blackpool Musical Festival. In addition to the musical numbers there was a short play, an original essay by one of the senior girls, pyramid building by boys of the gymnasium classes, and presentation of the trophies and annual awards.

Health of the Pupils

Dr. J. A. Marquis, school physician, in his report states that there was less sickness than usual in the school during the year. After the Christmas holidays there was the usual epidemic of flu colds.

In March, a little girl developed rheumatic fever, and as she required nursing attention at night as well as during the day, he advised that she be sent to the Brantford General Hospital where she remained for three weeks. As a result of this illness, the child was in a poor physical condition, and on April first she was returned to her home for the balance of the term.

Another little girl met with an accident to her eye. While playing with other pupils of the school, her eye in which she had a little sight, was accidentally struck and badly injured. She was removed to the General Hospital where treatment was given. Unfortunately, she lost what sight she had in that eye.

At the beginning of each term every pupil in the school is sent to the school dentist, and any treatment which is necessary is given.

OCULIST'S REPORT

Dr. Norman Bragg reports that 22 pupils were presented to him for eye examination, 10 of whom were males, and 12 females:

Condition of Sight	Male	Female	Total
1. Limited objective vision in both eyes.....	4	3	7
2. Limited objective vision in one eye.....	2	1	3
3. Quantitative perception of light in both eyes.....	3	3	6
4. Perception of light in one eye, none in other.....	0	2	2
5. Without perception of light in either eye.....	1	3	4
	10	12	22

Most of the pupils in this class have some degree of sight, 10 of the number being able to see with one or both eyes. A larger number, however, than other years, viz., 6, have only quantitative light perception in both eyes. We also

note that the number of amaurotics is larger than usual, 4 pupils being completely blind in both eyes, of which number 3 are girls.

Diseases Causing Blindness			
	Male	Female	Total
1. Keratitis.....	2	3	5
2. Uveitis.....	0	1	1
3. Sympathetic Ophthalmia (and Injury).....	1	0	1
4. Congenital Cataract.....	1	0	1
5. Retino Choroiditis.....	1	5	6
6. Myopia.....	1	0	1
7. Optic Atrophy.....	2	1	3
8. Buphthalmus.....	1	2	3
9. Albinism.....	1	0	1
Total.....	10	12	22

Dr. Bragg comments on the fact that there is an improvement in the number of cases of Sympathetic Ophthalmia.

SCHOOL EXAMINATIONS

Literary Work

All literary classes in our school are examined each June by the Inspector of Public Schools. Mr. Morrison in his report makes very favourable references to the work done in the school. He comments on the fact that the children wrote as rapidly in Braille as seeing children do with pencil and paper. Forms II, III and Junior IV were examined in arithmetic, spelling and reading, the spelling ranking very high when compared with standard spelling scales, and greater accuracy was shown in mental arithmetic than is shown by seeing pupils of the same grade.

Eighteen pupils were granted High School entrance certificates, eleven of these with honour standing. Of these one who went to the Peterborough Collegiate Institute stood first in the first term's work out of a class of forty-five, and two others who entered High Schools in cities in the Canadian west have met with similar success. The others nearly all proceeded with High School work in our own school for which provision is made.

Musical Examinations

The musical examinations in practical and theoretical subjects are held under the direction of Dr. Albert Ham early in June. These include tests in Piano, Organ, Violin, Solo Singing and Choral Class work, Rudiments, Counterpoint, and Musical History. Dr. Ham reports that students in the several Piano classes were very satisfactory and reached a high average in the examination tests. Some displayed quite exceptional talent. He makes a special comment on the work done in the Choral Class, which is an important factor in the life of the school.

Some of our more advanced pupils took the Toronto Conservatory examinations later in the term. In Intermediate Piano, the one pupil who tried this examination passed with honours. In Primary Theory there were eight applicants, of whom six passed with first class honours, and two with honours. In Intermediate Theory there were five applicants, most of whom made a satisfactory showing.

WORLD CONFERENCE ON WORK FOR THE BLIND

In March, 1930, President Hoover issued invitations to fifty countries, asking them to send delegates to New York City the following year to attend a World Conference on Work for the Blind. Thirty-seven countries sent delegates to this Conference which was held in April, 1931, under the auspices of leading organizations engaged in work for the blind in the United States. I attended as the representative from the Ontario School for the Blind.

The World Conference aimed at bringing about more intimate personal acquaintanceships among leaders engaged in work for the blind in various countries, and at giving workers information regarding activities in other countries which might suggest ways of improving the work at home. In addition it was desired to establish means of effecting more rapid interchange of information regarding developments in work for the blind, to promote the co-operative use of embossed literature, especially among countries speaking the same language and to enlist co-operation for the promotion of local work.

The papers were given in five languages, English, French, German, Italian, and Spanish, and a remarkable feature of the Conference was the system by which every delegate could hear in his own language these papers, and the discussion following. Over the back of each chair was a head telephone, and sections were reserved for the delegates from the different countries. The microphone was so placed that the speaker's voice was carried into four transmitting rooms, whence the speech was sent directly to the delegate in the hall in his own language by means of the ear phones.

Three outstanding personalities who made a deep impression on every delegate were C. N. Mackenzie of Auckland, New Zealand, Capt. Ian Fraser, C.B.E., of St. Dunstan's, London, and Capt. E. A. Baker, Managing Director of the Canadian National Institute for the Blind in Toronto. These three men were blinded during the war, and received their training at St. Dunstan's. Britain's delegates at the Conference impressed everybody by their practical point of view and sane effort. Canada's method of placing the adult blind in positions was highly commended. Our work along this line is far ahead of anything done by any other country except Germany, where the government insists upon every industrial concern absorbing so many blind men or women, and paying them a reasonable wage.

One of the subjects for discussion was the question of pensions for the blind. Great Britain is ahead of Canada in this respect as she provides pensions for all blind persons at the age of fifty years.

Another subject for discussion which directly affected schools for the blind was the establishment of a uniform system of Braille in English-speaking countries. At present there are differences between American and British Braille which are confusing, and a uniform system would result in a wider circulation of Braille books, which would reduce the cost of printing them.

Apart from the papers presented, the delegates were much interested in various inventions demonstrated for their benefit. The visagraph is an invention whereby the ordinary printed page of a newspaper or magazine is produced in raised, magnified type on a thin aluminum sheet which may be either preserved or erased.

Another invention consists of a disc which, running continuously for thirty-three minutes, will reproduce the contents of twenty-three pages of a book.

A representative from Switzerland had a shepherd dog, and he illustrated how dogs may be trained to guide the blind about crowded streets.

Many of the delegates were blind men, and it was interesting and inspiring to see how these men were bending their efforts to help others with the same handicap. The most outstanding personality at the Convention was Miss Helen Keller who gave an address of welcome to the assembled delegates the evening before the Convention proceedings commenced. The delegates from abroad were especially interested in meeting Miss Keller whose fame is known all over the world.

Most of the foreign delegates left New York at the end of the week for a tour of Washington, Pittsburgh, Philadelphia, and Baltimore, visiting the schools and organizations for the blind in those cities. Mr. S. C. Swift, M.A., Librarian for the Blind at Toronto and a graduate of this school, accompanied the delegates on their tour as an interpreter, his linguistic ability enabling him to render valuable service.

INTERESTING VISITORS TO THE SCHOOL

During the past year we had many interesting visitors at the school. Miss Ellen Page, Instructor of Manual Training in the Pennsylvania Institution for the Instruction of the Blind at Overbrook, Pa., was sent by Dr. Burritt, the Principal of that school. Dr. Burritt had visited us the previous year, and was much impressed by the work done in the Manual Training Department, and wished to see if some of our ideas could be carried out in his own school.

Mr. C. Walter Wallace, a successful blind organist and composer, Musical Director at the Olney Baptist Church in Philadelphia, was a guest at the school with his wife and daughter. Mr. Wallace was a former pupil in this school, and his experiences were of much interest to our pupils. He and his daughter, who is an accomplished cellist, gave an excellent recital in the Assembly Hall.

In May, Mr. E. Chesley Allen, Principal of the Halifax School for the Blind, visited the Ontario School with his wife and daughter. Mr. Allen was much interested in our school, and enthusiastic in his praise of the work accomplished.

We were also favoured with a delightful visit from Mr. Clutha Mackenzie, Principal of the School for the Blind at Auckland, New Zealand, accompanied by his secretary, Mr. Morton. Both of these men were delegates at the World Conference on Work for the Blind in New York City. Mr. Mackenzie's father was for many years the Premier of New Zealand, and he himself was a member of the Dominion Parliament after losing his eyesight at Gallipoli. The pupils were deeply interested in his recital of his many experiences.

Visits from such interesting people mean much both to our teachers and students. Interchange of ideas is always helpful to the members of the staff, and the pupils are always interested in hearing of activities in other schools.

In the early spring, the members of the Brantford Lions Club brought motor cars to the school on successive Sundays, and took each pupil for a ride in the country. In appreciation of their kindness the pupils entertained the members of the Lions Club and their wives at a special concert given in the Assembly Hall.

On October 9th, 1931, the teachers of the public schools in Haldimand and South Wentworth Counties paid a visit to the Ontario School for the Blind as a part of their Teachers' Institute Programme. After visiting the various classrooms they were given a demonstration of the pupils' work in the Assembly Hall. As is usually the case, these teachers were wonderfully impressed, and marvelled that blind children could accomplish so much. It is sometimes difficult for people with sight to realize that blindness does not prevent a child from

leading a normal, happy school life, and we always welcome visits of this sort so that the public may become informed regarding what is possible for those handicapped by blindness.

The Bursar submits the following report regarding the cost of maintenance:

Maintenance Expenditure for year ending October 31st, 1930.....	\$96,157 37
Maintenance Expenditure for year ending October 31st, 1931.....	94,656 76
Expenditures for year ending October 31st, 1931.....	\$94,656 76
Less amount returned to the Department as Casual Revenue.....	24,377 88
Actual cost of Maintenance and Salaries for year ending October 31st, 1931.....	\$70,278 88
Average attendance for year ending October 31st, 1930.....	130
Average cost per capita for year ending October 31st, 1930.....	\$573 63
Average attendance for year ending October 31st, 1931.....	130
Average cost per capita for year ending October 31st, 1931.....	\$540 60

W. B. RACE,
Superintendent.

Brantford, Ontario.

APPENDIX M

REPORT OF THE SUPERINTENDENT OF THE ONTARIO SCHOOL FOR THE DEAF

I have the honour to submit the Annual Report of the Ontario School for the Deaf for the year ending October 31st, 1931.

Attendance

The total number of pupils enrolled during the session 1930-31 was 356. Of these, 27 did not return in September. The average attendance was 343.

In the previous year, the total enrolment was 320, so that for the present year the total enrolment is 36 greater. This increase is due to a number of causes, among which the following may be noted:

1. Owing to the unemployment situation, nearly all the senior pupils returned to continue their education in order that they might become more efficient.

2. The publicity campaign, carried on by various means, brought the work of the school more prominently to the attention of the people of the Province, and thus, a great many parents of deaf children were induced to send their children to the School. The newspapers, throughout the Province, have been very generous in bringing the many advantages of the school to the attention of their readers.

3. The assistance of the School Inspectors and their teachers in reporting cases and urging parents to send them in to our school.

The recent census of the United States shows the number of deaf persons to be 1 in about 1,600 of the population. Applying this to Ontario, we find the number of deaf would be about 2,000. As 27 per cent. of the population are of school age, the number of deaf who should be attending school is 540. This indicates that there are about 200 deaf children of school age, who are not receiving an efficient public school education.

Buildings and Equipment

There are two residences, one for boys and one for girls. In each residence, there are eight dormitories and each of these has sufficient air space for 16 to 18 pupils, depending on the ages of the pupils, or a total of 270 pupils. In the boys' residence we now have 184 boys, and in the girls' 154. It will be seen that there are nearly 50 more boys in the residence than there should be, while in the girls', there is an excess of 20.

These congested conditions make it very difficult to maintain discipline or to care properly for the health of the children. If these conditions are to be remedied, new residences will have to be added to take care of at least 250 more pupils.

I recommend that a complete unit, consisting of residences, class-rooms, dining rooms and kitchen be provided so that all the junior pupils may be separated from the seniors, as is now being done in all the modern schools.

The hospital, girls' residence and the exterior of the Superintendent's residence have been repaired and some necessary alterations made.

Owing to the greatly increased attendance, many desks, tables, blackboards and other equipment have been added. Four new typewriters were purchased to carry on the work of the Commercial class, and considerable equipment

was also necessary for the work in Physiography. Many books have been added to the library in order that the work in "Silent Reading" might be carried out effectively.

Residual Hearing

Many of the children have more or less residual hearing. By making use of this, it is possible for them to do much better work and to make more rapid progress. In order to make use of this residual hearing, many instruments for the amplification of sound have been constructed.

In the United States considerable research work is being done along this line and good results have been obtained. The Coolidge Foundation of \$2,000,000 for the Clarke School at Northampton and the Federal Foundation of \$6,500,000 for research among the Deaf should help in investigating means and methods, which will greatly assist in the education of this handicapped class.

I suggest that our own Province might consider giving some assistance for the same purpose.

One of the most efficient pieces of apparatus for the amplification of sound is the "Radio Ear," manufactured by a firm in Pittsburg. One of these was installed in February and has proven very valuable in teaching correct speech to those with residual hearing.

I recommend that several of these or others of a similar nature be installed, so that much more time may be given to pupils to practice oral speech in the normal way.

Changes in the Staff

Several changes in the staff have taken place during the year. In January it was found necessary, owing to the increase in attendance, to engage two additional teachers. In September, Miss James of the junior department, Mr. Stewart of the senior department, and Mr. Morrice of the vocational department, were retired on pension and teachers were appointed to fill the vacancies this created. All of these teachers were connected with the staff for many years and they will be missed from the fellowship of the Association. Fortunately the services of Mr. Stewart were considered so valuable that he has been retained, for a time at least, as Editor of the Canadian. We regret also to record the death of our oldest teacher emeritus, Mr. Coleman. He was a member of the staff when the school was first organized in 1870, and although he had been superannuated for some years, he continued to take a very keen interest until the time of his death.

Rhythm

The value of the course in rhythm is inestimable in helping pupils with their accent and in modulation of their voices. By its aid, they are able to repeat in "time" many of the familiar patriotic songs and hymns, and to perform folk dances gracefully and with precision. In order that all the pupils might have this privilege, another piano was added to the equipment in September.

Entertainments

During the year the pupils gave two entertainments, one in November and the other in May, and both were very highly commended by all who had the opportunity to hear them. On the latter occasion, we were honoured by the presence of many distinguished guests including Premier Henry, Bishop O'Brien, Bishop Seager, Rev. Dr. Baker, Rev. Dr. Bell, Mr. W. H. Ireland, M.P.P., and several other representatives of the Clergy and Legislature, and

all expressed themselves as being greatly delighted at the remarkable programme presented by the Deaf children.

Visitors

During the year we have been favoured with visits from many from various parts of the Province who are interested in the work of the School and in the education of the deaf. Prominent among these were the Papal Delegate, Mgr. Cassulo, Mgr. Nicholson, Archbishop O'Brien, Representatives from the United Church Conference, and from the Baptist Ladies Missionary organization and from many other organizations that were holding conventions in Belleville. In all cases, the visitors were generous in their commendation of the work that is being done. They were also impressed with the fact that there is no limit to what the deaf can be taught if the proper facilities are provided.

Vocational Buildings

The vocational work is now greatly handicapped by the inadequate vocational buildings. These are the oldest buildings on the grounds and were formerly used for dormitories. They are not suitable for the work that is now being done and prevent any further expansion of work along this line.

If the deaf are to secure a proper training to give them even a foundation for a proper start in life, there should be new buildings constructed, which would be suitable for the work to be taught. If the deaf are to be given an even chance to compete in the vocations with their more fortunate brothers and sisters, they must be provided with facilities at least equal to those provided in the vocational schools in the Province.

Health

During the year there was no illness of a serious nature. This was no doubt due to the preventive measures that were practiced by all those in charge. Among these the following may be noted:

1. The constant exercise in the open air on the various pieces of playground equipment and on the skating rinks.
2. The vigilance of the teachers and supervisors in acting through the Junior Red Cross in inculcating and practicing health habits in food, exercise and rest, and in building up those who were under weight, by giving additional nourishment between the regular meals.

Milk Supply

The herd of cattle has been gradually changed until two-thirds of them are now pure bred Ayrshires and have been tested and found free of any tuberculosis. Application has therefore been made to have it placed in the accredited herd list.

Refrigeration

The refrigeration system is very inefficient and unsanitary. The ice chamber does not preserve the ice longer than July 1st and the construction is such that considerable dirt and sand filter through into the food chambers. The ice cut from the Bay of Quinte is condemned by the Provincial Board of Health as unfit for general use.

I therefore recommend that a system of electric refrigeration be installed as being the only method of securing the satisfactory results necessary for an

institution as large as this, where more than four hundred people are fed daily during the school year.

There is also great need for a gymnasium, in which pupils will be able to receive proper physical training, particularly during the winter months.

The Bursar's statement of expenditure, the Physician's report and the report of the Public School Inspector are appended hereto.

H. B. FETTERLY,
Superintendent.

Belleville, November 1st, 1931.

Officers of the School

H. B. Fetterly, M.A.	Superintendent and Principal
C. D. McGuire	Bursar
W. W. Boyce, M.D.	Physician
J. Chant, M.D.	Aurist and Oculist
Mrs. H. MacCluggage	Dietitian-Housekeeper
Miss K. Bawden	Secretary and Stenographer
Miss M. Allison	Trained Nurse

Teachers

D. R. Coleman	Teacher Emeritus
Miss Catherine Ford	Teacher of Professional Training

Supervising Teachers:

W. J. Campbell.	Geo. F. Stewart.	M. S. Blanchard, B.A.
Miss Elizabeth Deannard.	E. B. Lally.	

Teachers:

C. Ellis.	Miss C. O'Connell.	Miss A. James.
Miss V. Handley.	Mrs. A. Wannamaker.	Miss G. E. Rathbun.
Miss. E. Nurse.	Miss M. Benedict.	Miss G. Parry.
Miss L. Carroll.	Miss M. Code.	F. P. Cunningham.
Miss E. Panter, B.A.	Miss M. Hegle.	A. J. Clare.
Miss B. Rierdon.	Miss M. Lally.	Miss M. Totten.
Mrs. P. Blanchard.	Miss R. Van Allen.	Miss N. Tett.
S. A. Gordon.	Miss G. Burt.	Miss A. Sweetnam.
Miss F. M. Bell.	Miss M. Squier.	Miss H. Keeler.

Miss M. I. Cass.	Teacher of Art
------------------	----------------

Vocational:

Miss K. B. Daly, B.A.	Teacher of Household Science
A. C. Stratton	Teacher of Manual Training
Mrs. M. Glenn	Teacher of Sewing
L. Morrison	Teacher of Printing
T. O'Hara	Teacher of Carpentry
A. Morrice (until July 1st)	Teacher of Shoemaking
T. Truman	Teacher of Shoemaking
J. N. Boyd	Baker

LITERARY EXAMINER'S REPORT

Dear Sir:

Having completed my annual inspection of your school, in accordance with my instructions from the Minister of Education, I submit for your consideration a report on my findings, together with a recommendation or two which I trust you will not consider presumptuous on my part, considering my extended experience as Departmental Examiner at the school, extending back as it does for over twenty-three years.

During my visits in December and March, I visited each class in the Literary Department twice; and each sub-department in the Vocation Depart-

ment, at least once, giving to each class approximately the time that is usually given in a hearing school. I spent in all fifteen days among the classes.

I found the classification probably as good as is possible at present. In my judgment, however, that double class in the senior room should be conducted as two classes. This would, however, necessitate an extra teacher and that would scarcely be wise at this time in the term, but can be considered for September.

The teaching staff taken as a whole are efficient and generally speaking show deep interest in their pupils. As a former Public School Inspector, I need not tell you that they are not all of the same teaching ability. I never found a staff of any considerable size that was. You have several teachers who are outstanding as teachers of the deaf who would be hard to duplicate, and others who although justly classed as efficient are not quite the equal of those referred to; but as I have already said I would class them as a very efficient staff of teachers. Just here let me say in passing, that I am delighted to learn that you have been able to retain the services of Miss Ford. In my judgment it would have been a very serious loss to the cause of deaf education in Ontario had she been allowed to leave the Province.

Since in common with all children, your pupils vary greatly in ability, the classes also vary in proficiency. I found a number of classes where the children were bright and alert; and others who have not been so well endowed by nature, but who by hard work on their own part, and persistent effort on the part of their teachers, are making very fair progress; and still others who have apparently gone as far in literary studies as it is profitable to attempt to carry them. Their further progress along this line of education is a doubtful quantity. These in my judgment would receive more from the remaining years of their school life in properly conducted Vocational Classes, where they could be given as much literary work, as would be profitable to them, and give a special stress to vocational education, thus following the practice in many Collegiate Institute centres throughout the Province. It was a surprise to me recently to find that a very large percentage of the Public School pupils who pass High School Entrance voluntarily choose the vocational branches in our local Collegiate Institute. I will again refer to this in a later part of this report.

I note with pleasure, the progress that has been made in "Silent Reading." Having been connected with this school in my official capacity since before it became a school in the proper sense of the term, I can see the tremendous advantages in this form of instruction for these children, where the child acquires the power to interpret for himself, the printed page. An outstanding evidence of what I mean is the attitude taken by the children when a book is placed in their hands. They at once begin to read the story. To persons unfamiliar with conditions here a few years back, this would seem like a very commonplace statement to make, but those familiar with conditions at once recollect that it was not so in days gone by. About all the interest aroused by a book was a casual glance at the pictures, if there were any. The present system should in time produce a class of reading pupils among those of average mental capacity.

I would like to mention particularly the character of the work submitted to me in "Art." Very little attention was given to this subject for a long time, although I several times during my inspections saw evidences of latent powers along this line. I am indeed pleased to thus refer to what has been accomplished in the short time that the subject has received systematic attention. I have no hesitation whatever in approving of your school for Group 1 of High School Entrance.

The Rhythm Work is steadily advancing, and here again my experience extending back so far into the past, gives me an opportunity to know of its value. While rhythmic training is advantageous to any child, it has an especial value for these children who are deprived of the power to hear. I consider it one of the most valuable aids to education that has been introduced into this school within the last five or six years.

At my last inspection, the Radio Ear was practically not in use. It is gratifying to see that you have it now in constant and regular use, for it has an undisputed place in the education of these children. Whether or not its use can be profitably extended to general class instruction is a matter for further consideration. It is fulfilling your present intentions in its use at any rate, and the benefits are quite evident. But if it had no educational value, it certainly adds greatly to the experiences of every child with any residual hearing at all, when he is able to hear, in many cases for the first time, selections in music and the spoken word. One has only to watch their faces to see the joy and pleasure experienced.

I intend to refer to the vocational sub-departments individually, and as briefly as possible. But before doing so I would like to emphasize the importance of making every lesson in these departments a lesson in language, as well as the occupational instruction imparted. Since this is the first time I have made a real inspection of these departments, I will not specify to which one I refer, but in some cases much more attention should be given to the "language of the trade." The teachers in the literary classes cannot teach this language as well as it could be done in the vocational classes, for here it can be given just when it is needed by the pupil, and that need will help to fix it in the pupil's mind.

Household Science.—Miss Daley is apparently giving the girls a satisfactory course in cooking, etc., but when I visited the sewing room I was impressed by the vast amount of wearing apparel on hand to be mended. While it is very desirable that these girls, who in due time will probably have homes of their own, should know how to darn and mend, in my opinion too large a proportion of their time is occupied with mending, and not enough time devoted to new work. I see no reason why these girls should not be taught ordinary dress-making, and the making of underwear, etc., including the art of "cutting out" dresses. A little of this is done, but why not more of it? It can scarcely be done if they are to continue to do the mending for a family of over three hundred. Time-saving machinery can be had to do a large part of this mending and this would give the necessary time for more instruction.

Agriculture.—I was pleased to note that the teacher has made a start in the teaching of elementary scientific agriculture, but only a beginning. He is doing his best, but he has no special training along this line. Could he not be encouraged to take the Summer Course at Guelph or Kemptville? He would then be able to extend his efforts to some practical work in the way of gardening, both flowers and vegetables. It seems to me that this might offer a good opportunity to some of these boys. It is an occupation with a minimum of physical danger. Just how far the work could be carried along the line of "Farming" will depend on the future provision for vocational training in your school. Mrs. Wannamaker holds an Elementary Certificate in Agriculture, I believe, but the work would appear to me to demand a male instructor.

Printing Office.—I saw good work here, and I know that the office turns out a lot of excellent job work for the main school. The building, however, is not at all suited to the purpose, and they lack the equipment of a modern

office in that they have not a linotype machine for use and for instructional purposes. I will refer to the building under recommendations.

Carpenter Shop.—I was privileged here to see the boys engaged in the production of some very fine specimens of cabinet making. The pieces would do credit to the skill of a trained mechanic and would be an adjunct to any home. I thought, however, that while these boys are learning to make good joints, etc., that not many of them will follow cabinet making as a means of livelihood. The factory of to-day can turn out by machinery similar pieces that can be sold at prices far below hand-made work. There will, however, always be a place for the man who can build. Would it not then be good practice if these boys were taught to construct (in miniature if necessary) various buildings such as garages, barns and even houses? They would learn the constructional art, the names and uses of all the parts, and it seems to me would then be in a position to profitably employ their knowledge as a means of support when school days are over.

Manual Training.—Mr. Carson is handling this work very well, and the boys appear to be making progress. The accommodation, however, is not good.

Shoe Shop.—Here I saw senior boys engaged in the making of new boots, and they appeared to be good substantial specimens of the art. The whole process from the side of leather to the finished article was in process by the boys. But here again the factory looms up. How many of these boys will be called upon to make hand-made boots? It seems to me that if they were made proficient in making a neat job of mending boots in various stages of dilapidation that they would be well equipped to go out and earn a living. Since you could scarcely hope to find a market for the product, it is not feasible to install a modern shoe factory here, but the boy properly trained as a repair man could easily learn the handling of a machine if the occasion should arise in later life.

Laundry.—Outside of a little ironing the pupils, I understand, do very little in this line. It may have possibilities for some but without fuller inquiry I would not venture an opinion.

Bakery.—I understand that no pupils are now learning this business, and it appeals to me as quite a desirable trade for a deaf man. I remember on a former occasion being in the bakery and seeing boys at work there. Could not this be added to your present vocational departments?

You have the nucleus of a vocational school that could give your pupils a good foundation for the earning of a livelihood after they leave school; what you seem to require is an efficient man with the training that would qualify him to efficiently direct the activities of the whole vocational department, to act in the capacity of Vocational Director or Supervisor.

This expansion that appears to be the logical thing for these children, naturally brings up the matter of accommodations. The Household Science is well provided for in the main building, but the "trades" are not well provided for. The present buildings were originally built for dormitories and are very old, and in design are not suited to the purpose. If you are to carry out a satisfactory scheme of vocational training, a new building of suitable design seems to be an immediate necessity.

My recommendations therefore are: (1) A new building for vocational purposes. (2) A trained supervisor for that department responsible to you for the work in all the "trades." (3) A class in baking. (4) That those pupils who have apparently gone as far as is profitable in literary studies be given a minimum of that form of instruction and a maximum of vocational training. (5) That the work in scientific agriculture be extended. (6) That every vocational lesson be a language lesson as far as possible.

If the changes suggested in (4) above can be carried out it will greatly relieve the literary class teachers, and enable them to do still more for those who can profit by literary training.

In conclusion allow me to say that it is a matter of great personal satisfaction to me that when our Minister of Education finally made his selection of a successor to the late Doctor Coughlin, that his choice fell on a "school man." Your long and successful experience in practically all grades of schools has eminently fitted you to carry on the work in this school. As a former Public School Inspector, your sympathy will go out to the teachers in their efforts, for you understand their problem. I sincerely congratulate the Minister on his choice. May you be long spared to carry out the work you have so ably begun. Let me thank you and your staff for the many courtesies extended to me while making this my twenty-fourth inspection of The Ontario School for the Deaf.

Yours respectfully,

H. J. CLARKE, B.A.,
Public School Inspector.

PHYSICIAN'S REPORT

I beg to submit my report on the health of the School for the year 1930-31. The session can be considered somewhat unusual inasmuch as we had no dangerous cases of sickness throughout the term.

There were two cases of appendicitis, very mild and quickly recovered. In the month of November we had a number of cases of mild conjunctivitis. It was epidemic and commonly known as "Pink Eye." It was mild and only of importance as it was considered wise to quarantine as much as possible, and consequently the children were out of school. There were 22 cases. In December there were a few cases of chicken pox, which did not spread through the school. There were 8 cases. In January we had the seasonal visitation of influenza, but not a severe form. The average duration of an attack was five days unless accompanied by complication. The time of convalescence was quite rapid, no debility following, and the children soon back at school. The ordinary complications, besides the prevailing sore throat, were pneumonia and middle ear trouble. We had two of the former and several of the latter.

With the exception of what has been stated above, the health of the school was very good and compared favourably with previous years. Besides quite a number of cases of general indisposition that arises from time to time, I may mention the following—tonsilitis 7, epilepsy 1, croup 2, pleurisy 1, acne 6, pneumonia 2, otitis media 5, rheumatism 1, minor injuries, such as wounds, bruises and sprains 9, infected wound 2, abscess 2, fractures 2. One boy with fracture of lower end of right humerus, one boy with fracture of alveolar process of lower jaw from a blow. Both entirely recovered without deformity or loss of function.

It is a matter of congratulation that the Superintendent has had installed upon the grounds such splendid and adequate means for athletic sports and exercise for the children. It means so much to them in laying in a sound constitution in early life, and they are making good use of these opportunities.

I am,

Yours very truly,

W. W. BOYCE,
Physician.

Comparative School Statistics 1912-1930

I.—ELEMENTARY SCHOOLS

1. Day School Attendance

Year	Yearly Enrolment	Boys	Girls	Average Daily Attendance	Percentage of Average Attendance to Total Enrolment	Percentage of Aggregate to Possible Aggregate, i.e., Percentage of Actual to Possible Attendance
1912.....	467,022	239,187	227,835	291,210	62.35
1917.....	527,664	266,255	261,409	342,571	64.92
1922.....	601,485	306,225	295,260	425,018	70.66	86.80
1927.....	634,592	324,138	310,354	456,978	72.01	88.49
1928.....	641,128	327,713	313,415	459,847	71.72	89.09
1929.....	646,076	329,893	316,183	465,857	72.11	90.45
1930.....	658,535	336,954	321,581	478,950	72.73	*89.10

*Percentage of Actual Aggregate to Perfect Aggregate Attendance.

In arriving at the possible aggregate, all the school days for the term of a pupil of non-compulsory age, and all the schools day of a child of compulsory age, are counted, except in case of illness, properly certified, or of exemptions allowed by law, so long as he is a resident of the school section or until he is registered in a secondary school.

Duplications of enrolment in elementary schools owing to removals from one elementary school to another during the year, or owing to transfer to secondary schools, are carefully avoided in this calculation.

The percentage of average attendance to total enrolment, viz., 72.73, is low owing to the fact that a pupil once entered on the roll, if only for a few days, is counted in the enrolment for the year. The percentage of actual to perfect aggregate attendance (89.10) as given above, represents correctly the situation as regards regularity of attendance in the elementary schools.

2. Classification of Pupils

(A) RURAL

Year	Kinder-garten	Kinder-garten-Primary	Form I	Form II	Form III	Form IV	Form V *	Total	Percentage of total Enrolment

SUMMARY

Enrolment, Senior Fourth Grade on the last school day in May, 1931.....	51,750
Number of High School Entrance Candidates:	
Recommended by Principal on Group II.....	14,355
Taking written test on Group II.....	35,189
	49,544
High School Entrance candidate percentage of 1931 Senior Fourth Enrolment.....	95.74
Number of candidates successful on written test on Group II:	
By Regulation 11—(1) and (2).....	25,238
(3) and (4).....	1,243
(5).....	314
(6).....	318
	27,113
Total number of successful candidates.....	41,468
Percentage of all candidates who were successful.....	83.69%
(28.97% by Principal's recommendation and 54.72% by passing written test.)

Number of Pupils in the Various Branches of Instruction

1. ARCHITECTURE, MACHINE DRAWING AND DESIGN:

Mechanical Drawing.....	1,466
Architectural Drawing.....	861
Structural Steel Design.....	69
Estimating.....	27
Sheet Metal Drawing.....	132
Sheet Metal Work.....	87

II. ART AND DESIGN:

Lettering and Showcards.....	783
Drawing from Still Life.....	18
Elementary Drawing.....	443
Colour Study.....	499
Illustrating.....	209
Industrial Design.....	203
Modelling.....	120
Drawing from Still Life.....	221
Drawing from Life.....	239
Drawing from the Antique.....	202
Costume Drawing and Design.....	100
Basketry.....	36
Pottery.....	59
Woodcarving.....	74
China Design.....	27
Interior Decorating.....	17
Art Metal Work.....	16
Leather Work.....	82
Batik.....	50
Interior Decorating.....	537

III. PHYSICS AND ELECTRICITY:

Electricity.....	1,946
Telephony.....	176
Telegraphy.....	96
General Physics.....	76
Applied Mechanics.....	149
Radio.....	282

IV. CHEMISTRY AND GEOLOGY:

Mineralogy.....	13
Chemistry I.....	368
Metallurgy.....	18
Chemistry for Nurses.....	134
Industrial Chemistry.....	327
Geography.....	62
Materia Medica.....	10

V. MATHEMATICS:

Shop Mathematics.....	940
Arithmetic.....	2,837
Algebra.....	909
Geometry.....	600
Trigonometry.....	367

VI. ENGINEERING:

Stationary Engineering.....	635
Aircraft Mechanics.....	358
Marine Engineering.....	13

VII. SHOP WORK:

General Woodworking.....	697
Carpentry and Building Construction.....	173
Joinery and Cabinet Making.....	244
Plumbing.....	305
Machine Shop Practice.....	157
Acetylene Welding.....	861
Pulp and Paper Making.....	71

VII. SHOP WORK:—Continued.

Auto Mechanics.....	2,240
Brick Work.....	17
Structural Woodwork.....	11
Blue Print Reading.....	23
Machine Shop Practice.....	1,120
Foundry Work.....	13
Tool Making.....	8
Pattern Making.....	28
Watchmaking.....	28
Electric Welding.....	71
Shoe Cutting.....	43
Painting and Decorating.....	64
Steel Square.....	11
Slide Rule.....	5

VIII. DOMESTIC SCIENCE:

Cooking.....	3,338
Housekeeping.....	135
Home Economics.....	117
Home Nursing.....	616
Hygiene and Dietetics.....	352
Laundry.....	17

IX. DOMESTIC ART:

Sewing and Dressmaking.....	5,238
Embroidery and Lacemaking.....	470
Millinery.....	440
Drafting and Design.....	355
Power Machine Operating.....	182

X. COMMERCIAL WORK:

Penmanship.....	1,453
Typewriting.....	8,239
Stenography.....	6,063
Bookkeeping.....	3,421
Commercial Law.....	291
Commercial French.....	1,433
Commercial Spanish.....	200
Business Correspondence.....	1,273
Office Routine.....	96
Business Machines.....	337
Economics.....	91
Salesmanship.....	544
Retail Selling.....	27
Accountancy.....	55
Advertising.....	266

XI. PRINTING AND BOOKBINDING:

Printing.....	403
Bookbinding.....	300
Photography.....	47

XII. ENGLISH:

Reading.....	998
Composition and Spelling.....	2,497
Literature.....	1,176
Grammar.....	1,410
Public Speaking.....	256
History and Civics.....	427
Lip Reading.....	43
English for Non-English Speaking Persons.....	4,777

XIII. MISCELLANEOUS:

Music.....	90
Agriculture.....	19

TABLE 33—INSPECTORS AND INSPECTORATES, AS OF
SEPTEMBER 1, 1931

A—Elementary Schools

V. K. Greer, M.A., Chief Inspector, Public and Separate Schools....	} Toronto, Parliament Buildings.
